## **EXECUTIVE SUMMARY**

Using descriptive statistical analysis, this study examines trade and investment opportunities between India and 41 African and Asian economies (mostly LDCs) by focusing on the latter's export opportunities in the Indian market and on India's investment opportunities in the selected countries. It also discusses barriers to realizing the identified trade and investment opportunities between India and the selected economies, based on a review of the existing literature.

Amongst the sample countries, the top sources of merchandise imports for India over time include Nigeria and Angola from Africa, and Myanmar, Bangladesh and Nepal from Asia. India's main imports from Africa include petroleum oils, precious stones and metals, mineral ores, coal, natural gas, and agricultural products. India's imports from Asia have also been concentrated in few traditional product lines such as jute, fish, gold, petroleum oil, copper ores, ferro-silico, beans, nuts, and non-alcoholic beverages. Thus, the export baskets of the sample countries studied in this report are still not diversified enough to meet the rising demand for consumer and capital goods in India, which points to the immense untapped potential for enhancing these countries' trade and investment relationship with India.

While the value of these countries' services exports to India is much lower than that of their merchandise exports, India's services imports have increased over time from all the 38 countries for which services trade data are available. This shows these countries' growing services trade linkages with India, which must also be strengthened with the right policies. Over time, Nigeria and Nepal have remained the top African and Asian services exporters to India, respectively. India's major services imports from these countries include travel, transportation and other business services (OBS). This sectoral distribution also points to the need for enhancing these countries' export capacities in other sectors especially computer and information services, where there is potential for value-chain integration with India.

Limited capacity in LDCs of Africa, and even Asia, for supplying goods and services to India has been regarded as one of the main obstacles in full realization of their bilateral trade. India can thus potentially invest in those sectors in the sample countries which have supply constraints (i.e., where India's global imports exceed the concerned country's global exports as well as the associated region's global exports). Results show that none of the Asian LDCs have a supply constraint in any of the goods and services, due to the Asian region's huge global exports. In Africa, in contrast, almost all manufacturing goods and financial and computer-related services are identified as lacking supply capacity and such constraints seem to be evident in all the sample countries from the continent.

Meanwhile, India's cumulative announced greenfield investment over the 2010-2018 time period was \$19.2 billion and \$10.3 billion in the selected African and Asian countries, respectively. In Africa, the top recipients include Mozambique, Nigeria and Ghana with a cumulative 58.8% share, while in Asia, Bangladesh alone received around 72% of the total greenfield investment. Sector-wise, India has invested majorly in the communications sector in Africa (\$2.7 billion in the sample countries), followed by real estate and software & IT services; and chemicals and automotive and non-automotive OEM. This is in contrast to the Asian countries where India has invested heavily in sectors like textiles (\$2.3 billion) and automotive OEM (\$1.8 billion), followed by coal, oil and gas, business services, renewable energy, financial services and even wood products.

Finally, the study has also undertaken a quadrant analysis to identify the products and services where the selected countries still have low shares in Indian imports despite a revealed comparative advantage in exporting, suggesting the need for active trade promotion policies. Across both regions, most of these products belong to the categories of general, electric and precision machinery followed by wood articles, paper articles, as well as fruits and vegetable products, and also some textiles items in the case of Asian LDCs. For services, transportation, other business services, financial, and computer and information services have been identified as the target sectors for pursuing active trade promotion policies.

## CHAPTER 1

### Background and introduction

The importance of least developed countries (LDCs) has been growing in India's trade and investment flows over time. In fact, India has been strongly promoting trade linkages with LDCs, particularly those in Africa. Illustratively, African countries accounted for 8.3% of India's merchandise exports of US\$294 billion in 2017 up from 8.1% in 2010 (global exports of US\$220 billion); the respective shares of African LDCs were significant at 3.3% and 2.3%. In contrast, although the share of Africa in India's total merchandise imports declined from 8.9% in 2010 to 8% in 2017, the share of African LDCs increased from 1.9% to 2.3% (India's global merchandise imports were US\$350 billion and US\$444 billion in 2010 and 2017, respectively)<sup>1</sup>.

On the investment front, according to UNCTAD's World Investment Report (WIR) of 2018, total foreign direct investment (FDI) into the African continent declined from US\$46.8 billion in 2011 to US\$41.8 billion in 2017. Consistent with this trend, the stock of Indian FDI in Africa also declined from US\$16 billion in 2011 to US\$14 billion in 2016. Even so, UNCTAD (2018b) puts India as the eighth largest investor in Africa which is indicative of India's rising investment potential in Africa (including LDCs). Moreover, the flow of FDI has not been unidirectional. Between 2010 and 2014, the stock of African FDI in India increased from US\$57 billion to US\$73.3 billion, with FDI from Africa in India accounting for almost 23% of the country's FDI stock in 2014 (UNECA & CII, 2018).

The picture is somewhat different for Asia in terms of both trade and investment. Illustratively, Asian developing countries accounted for 47.5% of India's merchandise exports in 2017 but down from 50% in 2010; the respective shares of Asian LDCs were only 5.3% and 3.1%. Notably, the shares of South Asian and South-East Asian economies as a whole in India's merchandise exports in 2017 were 7.7% and 12%, respectively. In contrast, South Asian LDCs (Afghanistan, Bangladesh, Bhutan and Nepal) accounted for 4.7% and 2.5% in India's merchandise exports in 2017 and 2010, respectively; in contrast, the respective shares of South East Asian LDCs (Cambodia, Lao PDR, Myanmar and Timor-Leste) were very low at 0.41% and 0.39%. Meanwhile, the high share of Asia in India's total merchandise imports increased from 54% in 2010 to 56% in 2017, while that of Asian LDCs declined from 1.3% to 0.6%. However, in the case of South Asian LDCs, the shares were a meagre 0.37% in both these years (while the share of all South Asia remained around 3%); the shares declined for South East Asian LDCs from 0.32% in 2010 to 0.24% in 2017 (the share of all South East Asian economies increased from 10% to 11% over the same time-period).

Meanwhile, UNCTAD data on bilateral investment show that total FDI in South Asia declined from US\$31.3 billion in 2010 to US\$27.2 billion in 2012 and India's share in this total became much smaller over these years (reduced from a share of 4% to a share of 0.6%). Thus, India's outward FDI flows in South Asia declined from US\$1.3 billion in 2010 to US\$0.16 billion in 2012, though the stock of Indian FDI in South Asia increased from US\$0.52 billion to US\$1.07 billion between 2010 and 2012, respectively. Over the same time period, outward FDI from South Asia nearly halved from \$16.1 billion to \$8.7 billion, though the value of India as a

<sup>1</sup> Trade data are sourced from UNCTADStat ([https://unctadstat.unctad.org/wds/ReportFolders/reportFolders.aspx?sCS\\_ChosenLang=en](https://unctadstat.unctad.org/wds/ReportFolders/reportFolders.aspx?sCS_ChosenLang=en)); FDI data are sourced from UNCTAD FDI Statistics and WIR 2018.

destination fell only slightly from \$7 million to \$6 million and the share, though insignificant, nearly doubled from 0.04% to 0.07%. At the same time, India's outward FDI flows in South East Asia also declined from US\$4.13 billion in 2010 to US\$1.98 billion in 2012, though again, the stock of Indian FDI increased from US\$20.8 billion to US\$ 22.3 billion over these years. For outward FDI from South East Asia, the value of India as a destination jumped from US\$1.6 billion in 2010 to US\$1.9 billion in 2012 (though shares declined slightly from 10.6% to 10.3% over the same period).

These stylized facts also highlight a major constraint in working with FDI data. Publicly available data on FDI from UNCTAD and in different editions of the WIR do not report India's inward and outward FDI stock or flows bilaterally to enable a calculation of the value of investment originating in or destined for LDCs in either Africa or Asia. The required data are neither available in aggregate nor at sectoral levels, which renders any meaningful analysis of bilateral investment opportunities involving India and African economies and Asian LDCs virtually impossible.

A review of existing literature undertaken in the following chapter suggests that India's investment engagement in all Asian LDCs has still not been studied at the disaggregated sectoral level. Moreover, while several studies have examined India's trading potential in Africa and even in South and South-East Asia, including in LDCs in these regions, existing work has not yet provided a comprehensive, comparative analysis. Besides, all existing studies draw inferences on bilateral investment opportunities on the basis of aggregate FDI data, which is a serious limitation and has obvious implications for the associated policy conclusions.

Against this background, the objective of this study is to examine trade and investment opportunities between India and African and Asian economies (mostly LDCs) by focusing on the latter's export opportunities in the Indian market and on India's investment opportunities in the selected Asian and African countries. The study further aims at discussing the barriers to realizing the identified trade and investment opportunities between India and selected Africa and Asian economies, based on a review of the existing literature. The overall analysis involves secondary research based on literature and data on trade and investment available from different trade and investment databases (details in Chapter 3.2).

The selected 41 African and Asian economies covered in this study are as follows<sup>2</sup>:

- **Africa (33):** Angola, Benin, Burkina Faso, Burundi, Central African Republic, Chad, Democratic Republic of Congo, Djibouti, Eritrea, Ethiopia, Gambia, Ghana, Guinea, Guinea-Bissau, Kenya, Lesotho, Liberia, Madagascar, Malawi, Mali, Mauritania, Mozambique, Niger, Nigeria, Rwanda, Senegal, Sierra Leone, Somalia, Sudan, Togo, Uganda, Tanzania, and Zambia (**LDCs+3**)
- **Asia (8):** Bangladesh<sup>3</sup>, Bhutan, Cambodia, Lao People's Democratic Republic (Lao PDR/Laos), Myanmar, Nepal, Timor-Leste (East Timor), and Yemen (**all are LDCs**)

---

<sup>2</sup> The choice of countries was made in consultation with DfID on the basis of their importance in the SITA framework. In the case of Africa, for instance, this included 30 of the 33 LDCs in the continent and three non-LDCs - Ghana, Kenya and Nigeria.

<sup>3</sup> Note that LDCs were classified based on UNCTAD's latest 'The Least Developed Countries Report 2018', released in November 2018 (UNCTAD, 2018c). While this report includes Bangladesh amongst Asian LDCs (see Page 9 of the report), Bangladesh met the eligibility criteria for graduation from LDC status for the first time in 2018 only, but it is unlikely to leave the LDC status before 2024. Thus it may be noted that "three countries meet

On the trade front, the study aims to analyse the merchandise trade potential at the bilateral and disaggregated HS 6-digit-level, with data sourced from UN Comtrade at two different points in time – period average 2010-2012 and period average 2015-2017 – to enable a dynamic comparison of trade patterns and potentials over time. The analysis of services trade patterns and potential is carried out at the bilateral and sectoral levels using the recently released OECD-WTO Balanced Trade in Services Statistics (BaTIS) database for the period average 2000-2002 and 2010-2012, which, despite the lack of availability of more recent bilateral services trade data between India and the countries included in this study, will constitute significant value-added relative to existing literature.

Apropos to FDI, unfortunately, UNCTAD FDI data do not provide a disaggregated bilateral breakdown of inward or outward investment to enable more granular analysis. The study therefore seeks to examine India's investment opportunities in African countries and the Asian LDCs using data from 'fDI Markets', which is a private database on cross-border announced greenfield investment projects maintained by the Financial Times. These data cover 182 source and destination countries and 39 goods and services sectors over 2003-2018, enabling a comprehensive analysis of India's investment patterns and potential in African and Asian economies, most of which are covered in this database. The use of fDI Markets for analysis thus constitutes a significant value-addition to existing literature on this subject in the context of India.<sup>4</sup>

The layout of the report is as follows. Chapter 2 provides a brief review of existing literature followed by a chapter detailing methodology and data sources. Chapter 4 discusses the barriers faced by the Asian and African countries in realizing trade and investment opportunities vis-à-vis India. Chapters 5 and 6 discuss results from an analysis of bilateral merchandise and services trade, respectively. Chapter 7 identifies supply constraints in the selected 41 countries in exporting to India while Chapter 8 examines India's outward investment in these countries. Chapter 9 discusses results from the quadrant analysis undertaken to highlight sectors of export potential in these countries with respect to India. Finally, Chapter 10 concludes the study with policy recommendations.

the graduation eligibility criteria for the first time: Bangladesh and Myanmar meet all three criteria; the Lao People's Democratic Republic meets both GNI and human assets index criteria. The countries were duly notified of that finding and will be considered for graduation at the next triennial review in 2021...In its triennial review of the list of least developed countries, the Committee found that Bangladesh, the Lao People's Democratic Republic and Myanmar fulfilled the criteria for graduation for the first time. They will be considered for graduation at the next triennial review in 2021, with a view to graduating in 2024.", as per UN's Committee for Development Policy's Report at its twentieth session (12–16 March 2018 – pages 10 and 23) (see, UNCTAD, 2018a).

<sup>4</sup> However, one limitation of fDI Markets is that it only covers greenfield investment. According to World Investment Report (2018), announced greenfield investment (US\$720 billion) accounted for 50% of total global FDI (US\$1.43 trillion) in 2017, with the value of net cross-border mergers & acquisitions (M&A; US\$694 billion) making up for another 48.5%. M&A activity is thus not included in the analysis that follows, which is likely to influence some of the patterns that are observed in this report. To that extent, the analysis that follows may not be representative of the complete FDI potential that India may have in these countries, but that is a data limitation constraint that we cannot circumvent.

## **CHAPTER 2**

### **Literature review**

Several studies have examined India's trading potential in Africa, including in LDCs in that continent. For instance, Nayyar and Aggarwal (2014) show rising trade flows from India to Africa in the decade of the 2000s. India has been providing support for African development through its Exim Bank, while Africa too is ready to emerge as a strong trading partner for India. Afreximbank and Exim India (2018) highlight the importance of their rising economic partnership to strengthen South-South trade. Africa generally exports primary commodities to India, while the latter mainly exports manufacturing goods to the continent. However, as per Afreximbank and Exim India (2018), Indian-African trade is likely to double by the year 2021 if infrastructure bottlenecks and tariff and non-tariff barriers are properly addressed and potentials are fully realized. UNECA and CII (2018) have also analysed the pattern of Africa-India trade, emphasizing on better utilization of India's duty-free tariff preference scheme for African LDCs. This study also examines the effects of the Regional Comprehensive Economic Partnership (RCEP) agreement involving Australia, India, ASEAN+3 and New Zealand on African-Indian trade relations, but at the same time stipulates that the African Continental Free Trade Area (CFTA) would help to remove negative effects and provide more market access to Indian firms.

Existing work also notes that while China and India have been the main donors for Africa, their capacity to grant and areas of intervention differ. For instance, McCormick (2008) portrays China as major donor of both monetary and non-monetary aid to Africa in areas of trade, infrastructure, plants and equipment, etc. In contrast, India provides lesser aid but more of non-monetary grants in the form of technical assistance and mainly in the field of ICT. Despite China's greater economic engagements, the growing activities of India have also led to advancement in many African countries, besides emphasizing the need for improvement in Africa's reforms for trade (Broadman, 2008).

Banga and Saha (2016) follow a somewhat similar approach as ours of integrating LDCs into India's global value chains (GVCs) by looking at both trade and investment opportunities. The study identifies inputs into India's identified lead products which India could source from LDCs in a more competitive manner compared to existing sources as well as sectors for potential Indian investment in African and South Asian LDCs. Banga and Saha (2016) suggest, for instance, that 20 LDCs, including Uganda and Tanzania that have the highest potential market access into India, could export about U\$12 billion of inputs for exports of India's identified lead products.

In contrast, the literature is relatively thin in exploring India's trade opportunities at the disaggregated level in the South Asian region. For instance, UNCTAD, Commonwealth Secretariat, and CWTO (2010) show the strong potential of the textiles and clothing sector in developing regional supply chains in South Asia using case studies of India, Sri Lanka, Pakistan and Bangladesh. In terms of LDCs in the region, most studies largely pertain to Bangladesh. KPMG and DFID (2016), for instance, analyze the export and import profile of Bangladesh with respect to changes in its trade basket, revealed comparative advantages, trade balances, and engagement mainly with the UK. Thus, India's trade potential with all the South Asian LDCs at the disaggregated level has not been properly examined, which would be one of the important contributions of this study.

Regarding LDCs in South East Asia, namely, Laos, Myanmar and Cambodia, several studies in the last few years focus on India's bilateral trade relations with them and suggest measures for enhancing trade as well as promoting growth in LDCs via India's policies. Illustratively, Exim Bank (2014) documents the rising growth graph of these countries with a number of economic reforms already underway, with international trade recognized as one of the main contributors. The study shows how India has developed linkages with ASEAN countries since its 'Look East Policy' of 1992, especially its growing trade with LDCs along with Vietnam (CMLV) which has risen from US\$1 billion to almost US\$11 billion over the period of 2004-13. But Exim Bank (2014) also mention that India's exports mainly consisted of pharmaceuticals, machinery, motor vehicles, plastic articles and cotton. Notably, there exists a lot of potential to enhance bilateral relations where border trade between India and CMLV is of higher importance, linking through Myanmar. Particularly, in the case of Myanmar and Bangladesh, Exim Bank (2018a) provides an analysis of India's export potential in these countries using HS 6-digit level commodities.

In 2008, India introduced the Duty Free Tariff Preference Scheme (DFTP) for providing unilateral tariff preferences to all LDCs in their merchandise exports to India. However, LDCs' date of joining the scheme differs. Over the period 2008-12, the scheme covered almost 85% of India's total tariff lines in which LDCs were allowed duty-free market access in India, followed by another 9% lines where Margin of Preference (MOP) benefits were allotted (ranging between 10-100%), while only 6% of lines remained in the exclusion list with applicable MFN duty rates. Interestingly, in 2008 itself, the scheme covered about 92% of the tariff lines of LDCs export interest. The DFTP scheme was extended in 2014 by India's Department of Commerce in terms of coverage of countries and tariff lines (6-digit level). Consequently, the scheme now provides duty-free or preferential market access to about 98.2% of tariff lines.

As on October 2017, the following LDCs were notified as beneficiaries of the DFTP scheme: Benin, Burkina Faso, Burundi, Central African Republic, Chad, Comoros, Eritrea, Ethiopia, Gambia, Guinea, Guinea Bissau, Lesotho, Liberia, Madagascar, Malawi, Mali, Mozambique, Niger, Rwanda, Senegal, Somalia, Sudan, Uganda, Tanzania, Togo, Zambia, Afghanistan, Bangladesh, Cambodia, Timor-Leste, Lao PDR, Myanmar and Yemen. The number of tariff lines under MoP scheme have also been reduced from 458 to 114, and from 326 to 97 under the exclusion list (Ministry of Commerce, 2017; International Trade Centre, 2015). The present study also provides an opportunity to examine the export potential that the select African and Asian countries have in the Indian market, given the DFTP scheme and its extension.

As compared to existing and growing literature which examines India's trade potential in selected LDCs, the lack of available data FDI from UNCTAD and in WIR also accounts for the comparatively thin literature studying India's investment potential in Africa and Asia. Even in those few studies, the focus is not entirely on understanding the investment dynamics; rather they look at growing Chinese and Indian economic engagements in the regions both in terms of bilateral trade and investment. For instance, Schiere (2011) mentions about China's involvement in financing of development projects in Africa and investing in their infrastructure. At the same time, China also stands to gain from Africa in terms of getting access to raw materials, finding a market for its manufactured exports and investment in labour-intensive manufacturing.

In other work, Nayyar and Aggarwal (2014) show not only rising trade flows from India to Africa in the decade of the 2000s, but also growing outward investment. While Africa is all set

to emerge as a big investment partner for India, the study also mentions potential hindrances that can affect this rising trend. In this respect, more recently, Afreximbank and Exim India (2018) have highlighted how both the Exim Banks are working to deal with the issue of lack of finance, which majorly disrupts trade and investment flows between India and Africa.

At the same time, growing bilateral investment flows are also indicated in this decade, where both India and Africa are continuously offering each other as preferable investment destinations. In another recent joint report, UNECA and CII (2018) also analyse Africa-India investment patterns along with trade. Lack of information and basic infrastructure are reported as big concerns preventing the required growth in both trade and investment.

Overall, existing literature largely looks at aid for trade, trade-investment linkages, as well as India's comparison with China, the major donor in Africa. However, there are very few studies which suitably portray India's investment opportunities in African and Asian LDCs. Only Banga and Saha (2016) identify potential areas (such as packaging) for Indian investment in African LDCs which could productively increase Africa's capacity to export and help them integrate into India's GVCs. However, there is not much work specific to South Asian LDCs. KPMG and DFID (2016) particularly focus on understanding the investment climate of Bangladesh including a historical perspective on FDI, as well as sector- and country-wise analyses. Kumar and Singh (2009) identify impediments to regional integration in South Asia in terms of promoting trade and investment and suggest a more proactive role for India to lead on this front.

Regarding South East Asian LDCs, India through its Exim Bank provides a lot of support to its companies investing in CMLV via lines of credit, project exports, etc. (Exim Bank, 2014). As these countries suffer from infrastructural deficiencies, underdeveloped financial and education sectors (but with growing modernization in ICT), these areas provide plenty of opportunities. Investments in LDCs' agriculture and allied fields of fisheries and forest products (teak) are other potential areas for Indian companies to consider. However, with Myanmar and Bangladesh in particular, a more detailed investment analysis has been done sector-wise by Exim Bank (2018a) using fDI markets database, along with comprehensive trade potential analysis. The report documents that over the period 2003-2018 (March), both the countries obtained most of India's greenfield investment in their coal, oil and natural gas sectors, followed by automotive OEM, financial services, etc. In other work, Dixit (2015) emphasizes the obstacles that Indian investors have to face in CMLV in terms of low connectivity due to latter's weak road and rail infrastructure, along with the need to deal with presence of already strong competitor-investors therein.

On the whole, India's investment engagement in all Asian LDCs has still not been studied at the disaggregated sectoral level particularly for South Asia. Even in terms of African LDCs, exploring India's investment potential is limited to a few selected sectors as in Banga and Saha (2016). Against this background, the present study would also add value by examining India's investment opportunities in 41 selected African and South Asian economies using data from fDI Markets.

## CHAPTER 3

### Empirical methodology and data sources

This chapter outlines the methodology used to identify export opportunities of selected Asian and African economies in India and identify those sectors with investment potential for India in these selected economies, mostly LDCs. The data sources used for analysis are described in the second section of this chapter.

#### 3.1 Methodology

This section outlines the methodology adopted in the study.

##### 3.1.1 Identifying export opportunities in India

The methodology for identifying Africa and other Asia's export opportunities in India utilizes a two-pronged approach.

###### 3.1.1.1 Mapping African and Asian exports

The first approach involves mapping existing exports of selected African and Asian countries to India over time with India's total imports from the rest of the world (ROW) based on disaggregated trade data at the HS-6 digit level sourced from UN Comtrade (in case of goods).

Note that the study uses mirrored statistics, i.e., India's imports of goods from the select 41 countries in all this analysis, due to the former's much better coverage given the limited availability of data on these countries' exports to India, especially at the HS-6 digit level.

###### 3.1.1.2 Quadrant analysis

The second approach involves the use of quadrant analysis (based on Widodo, 2009 and KPMG and DFID, 2016) to classify existing bilateral merchandise exports of the selected countries to India at the HS-6 digit level on the basis of their competitiveness and shares in the latter's exports.

Quadrant analysis entails the use of the following two indices:

(i) The Bilateral Revealed Comparative Advantage or the BRCA Index: The BRCA measures a country's comparative advantage in exporting products to partner markets. An index value exceeding one suggests that the exporting country is competitive in the concerned product in the partner market, while a value less than one suggests the converse.

$$\text{Formally, } BRCA = \frac{\frac{X_{ij}^k}{\sum X_{ij}}}{\frac{X_{iw}^k}{\sum X_{iw}}}$$

[where X = export value, i is the exporting country, j is the destination market (India), k is the product at the HS6-digit level, and w is the rest of the world.]

To make intertemporal and international comparisons meaningful, the BRCA index has been normalized by using the formula  $(BRCA-1)/(BRCA+1)$ . A positive value of the normalized BRCA index reveals a comparative advantage while a negative value denotes comparative disadvantage.

(ii) Share in Indian Imports (Share): This share measures the demand for foreign goods in the Indian market and is constructed as the ratio of India's import of a product from a selected country to India's import of that product from the world.

$$\text{Formally, } Share = \frac{M_{ij}^k}{M_{iW}^k}$$

[Where M = import value, i is reporting country (India), j is partner (selected 41 Asian and African countries), k is the product at the HS6-digit level, and W is world.]

For the purpose of analysis, we delineate the share into below-average and above-average where the average (Avg) is calculated over all the HS6 products that India imports from a particular country. A product share below India's calculated average for a particular country suggests that the product has a low demand in India's import basket, and vice-versa.

**Figure 3.1: Exposition of quadrant analysis**

		Share in India's Imports	
		<i>Share &lt; Avg</i>	<i>Share &gt; Avg</i>
Bilateral Revealed Comparative Advantage (BRCA) Index	<i>BRCA &gt; 0</i>	Group B: BRCA > 0 and Shares < Avg	Group A: BRCA > 0 and Shares > Avg
	<i>BRCA &lt; 0</i>	Group D: BRCA < 0 and Shares < Avg	Group C: BRCA < 0 and Shares > Avg

The quadrant analysis thus classifies each country's HS-6 digit products' exports to India into four groups based on the BRCA index and share in India's imports (see Figure 3.1). Group A comprises products whose BRCA values are positive and the share in India's total imports is above-average; this group thus represents already significant exports which are being competitively supplied by the selected African and Asian countries to meet the prevalent demand in India for such products. The policy response for these products would be to preserve the status quo.

Group B comprises otherwise competitive products but where the concerned country is not able to capture a significant share of the Indian market (below average share). This group thus

identifies products/sectors where comparative advantage exists but where more opportunities can be created by appropriate policy measures such as export promotion in the selected 41 countries.

In contrast, Groups C and D include HS6 products where the countries lack comparative advantage, but at least possess a significant share in India's total imports in the former case, which warrants some policy response towards building comparative advantage in the concerned exporting country.

Note that the analysis of goods trade will be carried out over two time periods - 2010-12 and 2015-17 – to provide a dynamic picture of the export potential. We average the trade data over three year periods to minimize fluctuations in reporting practices.

Finally, the analysis is replicated for ‘services trade’ using bilateral and sectoral data from OECD-WTO Balanced Trade in Services Statistics (BaTIS) over two different time periods: 2000-02 and 2010-12. The subscript “k” in the BRCA and Share measure then denotes the services sub-sector as reported in BaTIS (see Chapter 3.2 for details).

### ***3.1.2 Identifying sectors with investment potential for India in the selected countries***

Inadequate supply-side capacity is one of the main reasons for selected African and Asian economies’ (i) limited export competitiveness at the sectoral level; (ii) lack of diversified production and export structure; and (iii) limited integration into regional and global value chains. This suggests the need for both regional and extra-regional investment in sectors where these countries exhibit competitiveness but lack capacity.

The methodology for identifying sectors in these 41 countries with investment potential for India is based on a two-pronged approach:

- Identifying existing bilateral investment sectors between India and the chosen countries over time based on data from fDI Markets; and
- Building on Banga and Saha (2016), considering sectors where India’s global imports exceed the concerned country’s global exports as well as the associated region’s global exports, thereby indicating a supply constraint in both the country and the geographical neighbourhood.

This two-pronged approach aims to provide a complete identification of existing and potential investment opportunities for India in the chosen 41 countries based on both aggregate and bilateral investment data, which is an original contribution to existing literature. The analysis is carried out during the cumulative time period 2010 to 2018 to enable a wider coverage of countries and sectors from fDI Markets.

## **3.2 Data sources**

This section describes the data sources used in the study.

### ***3.2.1 Trade data***

Bilateral merchandise trade data between India and the selected 41 countries are sourced from UN Comtrade at the disaggregated HS 6-digit level at two different period averages – 2010-12

and 2015-17 – to enable a dynamic analysis. The study works with mirrored statistics in the case of goods trade analysis, i.e. looks at India's imports from the selected countries instead of their exports to India, due to the much better coverage of import data given the limited availability of data on these countries' exports to India, especially at the HS-6 digit level.

The analysis of services trade patterns and potential are carried out at the bilateral and sectoral levels using the recently released OECD-WTO BaTIS database for the period average 2000-2002 and 2010-2012. While 2012 is the last year for which BaTIS reports these data, the analysis in this report still constitutes significant value-added relative to existing literature, given the absence of more recent bilateral and sectoral services trade data for the countries covered in this study. Direct exports are used in the case of services trade analysis as the final balanced value of both exports and imports is reported in this database.

The coverage of trade data for the sample countries in the study is reported in Table 3.1.

### **3.2.2 Investment data**

Data on aggregate FDI are sourced from UNCTAD/WIR though these data are not available at the sectoral level or even bilaterally beyond 2012. More recent bilateral and sectoral investment data are thus sourced from 'fdi Markets' which is a private database on cross-border greenfield

investment maintained by the Financial Times. These data cover 182 source and destination countries and 39 goods and services sectors over 2003-2018, enabling a comprehensive analysis of India's investment patterns and potential in African and Asian economies, most of which are covered in this database. The use of fDI Markets for analysis thus constitutes a significant value-addition to existing literature on this subject in the context of India.<sup>5</sup> The coverage of FDI data for the 41 sample countries is reported in Table 3.2.

<sup>5</sup> However, one limitation of fDI Markets is that it only covers greenfield investment. According to World Investment Report (2018), announced greenfield investment (US\$720 billion) accounted for 50% of total global FDI (US\$1.43 trillion) in 2017, with the value of net cross-border mergers & acquisitions (M&A; US\$694 billion) making up for another 48.5%. M&A activity is thus not included in the analysis that follows, which is likely to influence some of the patterns that are observed in this report. To that extent, the analysis that follows may not be representative of the complete FDI potential that India may have in these countries, but that is a data limitation constraint that we cannot circumvent.

## **CHAPTER 4**

### **Trade and investment barriers between India and select African and Asian countries**

A review of the existing literature indicates challenges in both African and Asian countries mainly LDCs in accessing foreign markets for their products and in attracting foreign investment: huge infrastructure deficit, lack of finance, excessive regulation, etc. But the extent and impact varies between regions, also because there are a greater number of LDCs or low-income countries in Africa (33 LDCs out of total 54 African countries) which are still at much lower levels of development. Meanwhile, India also faces sector-specific constraints while trading with and investing in the selected African and Asian countries. This chapter not only identifies bilateral non-tariff barriers (NTBs), but also discusses NTBs imposed by selected African and Asian countries (including those by India too) in general. These barriers include those identified in the Europe Commission's (EC) Market Access Database (European Commission, n.d.) and the United States Trade Representative's National Trade Estimate Report 2019 on Foreign Trade Barriers (USTR, 2019), which are mainly with respect to the EU and the US, but are generally applicable to a number of other countries including India who are trading with and investing in the selected countries.

#### **4.1 Barriers to India-Africa bilateral trade and investment**

It is expected that India-Africa trade will grow up to USD 117 billion by 2021 (Afreximbank & Exim India, 2018). Despite such immense trade as well as investment potential as gauged between India and Africa (mainly LDCs), there continue to be both tariff and NTBs preventing the realization of this trade and investment potential. Based on a review of the existing literature, the major barriers to India-Africa trade and investment include:

- a) Exim Bank (2018b), UNECA and CII (2018), Afreximbank and Exim India (2018), along with WTO and CII (2013), etc. have clearly stated that Africa is still plagued with poor infrastructure. This factor ultimately raises transaction costs for both traders and investors. Exporters need proper roads, railways and other transport to access domestic markets for their goods, along with proper storage and warehousing facilities. They require support of regular power and water supply whose supply is under crisis in many parts of Africa. For instance, huge infrastructural bottlenecks, persistent energy crisis and limited cross-border linkages in West Africa have been specifically highlighted (Exim Bank, 2018b). Linked to this is the huge constraint of capacity on the supply side. The market is not developed enough in Africa for services to support and promote trade-investment activities, such as, development finance, marketing and so on. Further, with India, Africa's bilateral trade becomes even more challenging as India too has weak infrastructural set up with high production, transaction and logistics costs. As a result, most Indian exporters prefer to sell on free-onboard basis to avoid rising insurance and shipping charges and to shift risks of loss to potential buyers in Africa (Afreximbank & Exim India, 2018; Nayyar & Agarwal, 2014; WTO & CII, 2013). So, while both sides face similar issues, the gap is more in the case of African countries. In fact, as per Afreximbank and Exim India (2018), Indian-African trade is likely to double by the year 2021 if infrastructure bottlenecks and tariff and NTBs are properly addressed and potentials are fully realized.
- b) Another major characteristic feature of Africa which affects its expansion and connection with many countries including India is the huge trade finance gap. There is almost a complete absence of proper financing mechanism to support exporting in a

sustainable way. The functioning of the capital markets in Africa is inefficient (Afreximbank & Exim India, 2018; Broadman, 2008).

- c) FDI is a highly important external source of finance due to the still low generation of fiscal revenues in many low-income African countries. But FDI flow to Africa declined in 2017<sup>6</sup> due to various macroeconomic reasons such as weak domestic demand, bad governance, political instabilities, along with lower public spending (particularly in West Africa). This has further led to limited availability of finance (Exim Bank, 2018b).
- d) Lack or asymmetry of information between Africa and India mainly for Indian exporters is reported as one of the major barriers. For instance, UNECA and CII (2018) point out the lack of online data to provide necessary information to Indian firms regarding business in Africa. It is found that many African countries also face difficulty in exporting as they lack awareness about existence of duty-free tariff preference scheme offered by India to LDCs (Afreximbank & Exim India, 2018). This is highly crucial for SMEs operating on both the sides, but more so for African LDCs. Due to limited information, many Indian exporters find it difficult to access markets for their products in Africa. In fact, many a times, they find it tough to search for prospective buyers while connecting to firms in Africa. This is even more complex in the case of services exports as the sector is still not well developed in Africa. African firms too face problems in tracking potential buyers in India for their products (WTO & CII, 2013).
- e) UNECA and CII (2018) have also emphasized the under-utilization of India's duty-free tariff preference (DFTP) scheme for African LDCs. One reason for this is the inability of African firms to meet Indian product standards. For instance, Banga and Saha (2016) stress that "the 'LDC package' offered by India (Duty-free Tariff Preference scheme) provides an opportunity to strengthen India's GVCs and increase its number of trading partners. However, existing supply constraints, both in India and in partner LDCs, have led to underuse of the scheme, restricting India's engagement with potential trading partners" (including Asian LDCs).
- f) While there are growing vertical trade complementarities between India and Africa in recent times, such as in the cotton-textile garment value chains, the complementarities that exist are not yet fully explored and remain weak when the entire manufacturing sector is considered. Africa's product diversification is still at a very low level compared to Asian countries including India. It mostly supplies primary goods and natural resources to India, while the latter exports manufactured goods, refined petroleum and pharma products to Africa (UNECA & CII, 2018).
- g) PHD Research Bureau (2017) lists other key barriers which are faced by Indian exporters while trading with Africa. They include lower transparency in African regulations such as custom procedures and enquiry points; fluctuating export prices; demanding competition policies and licensing norms required for foreign firms in Africa; preference towards other countries (due to lower prices offered) or to local suppliers. Rules of origin criterion and variable import levies also affect India's exports to Africa. Importantly, custom clearance procedures including inspection and testing, custom valuation and classification procedures too are reported as major issues while exporting to Africa. While India has streamlined its custom procedures and trade facilitation with a risk management system for easy clearance of consignments, the

---

<sup>6</sup> "FDI flows to Africa decreased by 21.5 percent to US\$ 41.8 billion in 2017 from US\$ 53.2 billion in 2016." (Exim Bank 2018b).

complexity of India's import regime also tends to affect African exports and investments into India (WTO & CII, 2013).

- h) Most African nations continue to be predominantly agrarian economies. This further restricts linkages into GVCs where trade has been mostly in manufacturing and now progressively in services. In fact, the world is moving to a digitalized and innovation-driven set up which require more capacities, high productivity, better infrastructure and communications, etc. which Africa currently lacks. Thus, Africa is still at a lower rung of development with a lack of skilled labour and lower levels of human capital development (Broadman, 2008; WTO & CII, 2013; Lucey, Schoeman, & Makokera, 2015).
- i) A less conducive business environment with problems in getting visas or permit, along with complex processes in obtaining them, limit setting up of firms in Africa. There is almost an absence of bilateral investment agreements which is one main reason why not all African countries get quality FDI from India. India too has some stringent investment criteria, which prevent African firms to set up business in India (Nayyar and Aggarwal, 2014; UNECA & CII, 2018; WTO & CII, 2013).

Thus, concerns of India and Africa including LDCs, while exporting and investing in each other's territories are majorly pertaining to NTBs. Both face similar sets of issues relating to complex custom regulations and huge infrastructure deficit making transaction costs larger. Poor regional market integration in Africa is reported to affect easy movement of goods across borders. Hurdles in tracing reliable local business partners or buyers continue to persist, with connectivity issues on the both sides inhibit the trade potential between India and Africa.

#### **4.2 General barriers in Africa: products and regulations**

There are several sector- and country-specific barriers in Africa that prevent Indian firms from exporting to and investing in that continent, and African firms in turn from integrating into value chains, including with India. These barriers relate to the area of complex custom and registration procedures, restrictions or ban on imports and exports, technical barriers to trade (TBT) and sanitary and phytosanitary (SPS) barriers, discriminatory treatment, taxation, etc. (USTR, 2019; European Commission, n.d.). For instance, Nigeria prohibits imports of a number of products since 2002 including poultry, beer, medicaments, fruit juices in retail pack, soaps, mosquito repellent coils, paper board, bagged cement, carpets, footwear, used motor vehicles, ball point pens, etc.<sup>7</sup> (absolutely prohibited items include arms and second hand clothing). On the other hand, although imports are not banned for more than 40 items<sup>8</sup>, since 2015, the Central Bank of Nigeria (CBN) restricts importers of goods and services to access foreign exchange at Nigerian Foreign Exchange markets for promoting local production. The items range from rice, cement, processed meat and vegetable products, steel pipes, iron rods, wood board, to kitchenware, textiles and clothing, rubber and plastics, cosmetics, furniture and now fertilizers too from December 2018. Ethiopia also puts a number of restrictions while importing used clothing, arms and ammunitions (except those done by its Ministry of Defense), goods of a commercial nature, and those which cannot be undertaken via formal banking payment system. Ghana continues to restrict the imports of poultry products since 2014 by limited issue of import permits to domestic traders for promoting this sector. Also, imports of tilapia are also banned for protecting fishermen. For importing of all food, drugs, cosmetic and

agricultural products, the country needs certificates. In fact, as an SPS measure, Ghana bans the import of meat if it contains more than certain specified fat content, such as, more than 25 percent for beef and pork, 30 percent for mutton, etc. as well as restricts imports of milk powder items if contains milk fat of less than certain limit. In Angola, importers need to get valid general import license from the government as well as specific license by subject-concerned Ministries, such as, from the Ministry of Health in case of pharmaceutical substances; from the Agriculture Ministry for agricultural goods, plants, fruits, seeds, etc.; from the Ministry of Post and Telecommunications in the case of postal stamps, radios, transmitters and such devices; and from the Ministry of Customs, etc. All such ministerial authorization in Angola delays the process with additional costs to bear. Further, the country restricts imports of genetically engineered (GE) components, except as food aid, and usage of agricultural biotechnology in production. An SPS certificate is also required from the government while importing animal and plant products. Even in the case of Ethiopia, there is a burdensome process of approval for commercial imports of GE grains and oilseeds. Those processed food items including cereals, soybean oils, etc. prepared by using GE ingredients must meet labeling requirements when imported. Furthermore, Kenya has also banned import of GE food and feed, even in case of food aid shipments. In addition, certain products which pose a threat to the health, safety or environment, face various quantitative restrictions. Kenya also bans the import of second-hand clothing and footwear by imposing heavy import duty rates. On the export front too, Kenya limits the exports of scrap metal as well as copper waste, bans exports of raw agricultural produce including macadamia, cashew nuts, pyrethrum, etc.

Exporters to Nigeria have also mentioned burdensome customs procedures in terms of lengthy clearance, physical inspections and uneven valuation methods which can create delays in movement of goods and losses for importers in case of perishable items. Weak ports with heavy congestion further contribute to rising costs. There is another key barrier reported relating to mandatory pre-shipment registration with Standard Organisation of Nigeria (SON) of several categories of products, whether domestically produced or imported. This also includes e-Registration of machinery and electronic equipment since 2013. Not only fees rise for mixed shipments, but certificates' validity is also for a short duration ranging between 6 months to 1 year. Hurdles are reported while using Nigerian online platforms, where most information/documents are found to be missing. Particularly, in case of agriculture, food items and drugs/pharmaceutical sectors, exporters need to register all their products (and pay separate fees for different sizes of same type of goods) at National Agency for Food and Drug Administration (NAFDAC). The problem indicated is that representatives of NAFDAC need to physically inspect all the production facilities of companies for all new items meant for selling to Nigeria. Secondly, foreign exporters need to find Nigerian partner/distributor to register the product who ultimately gets imports rights. Moreover, lack of capacity is reported for reviewing import certificates, doing inspections and testing meant for clearance. Even in case of Angola, technical regulations and procedures for certification and testing for imports are said to be documented in a poor manner. Its custom services have although improved recently due to easing regulation on pre-shipment inspection of imports, but there are still barriers to trade due to low transparency and biasedness. Illustratively, shipment equal to or more than US\$1000 requires clearing agents, who have actually increased in number but continue to charge higher fees due to competition.

Meanwhile, Ethiopia imposes the condition of obtaining letter of credit (LoC) for import transactions and many a times importers are not always granted import permits which must be applied for before placing the contract. Ethiopia also has several custom barriers in terms of regular logistic backlogs owing to much paper-based process and structural inefficiencies, high

shipping and freight costs, etc. Ghana's customs practices are also still reported to be lengthy with unpredictable applications and use of system of pre-arrival risk assessment and reporting, and after-arrival inspections, etc. (despite introduction of electronic cargo clearance at ports since 2017). On top of it, Ghana has its own national standards (more than 2400) on food, agriculture, electrical, pharma goods, etc. under Ghana Standards Authority (GSA). GSA officials also inspect imports of goods classified as high-risk goods (HRGs); however such classifications are found to be confusing for exporters (viz. alcoholic and non-alcoholic goods could be in more than one category of beverages, drugs, industrial goods, etc.). Further, importers of HRGs need to register themselves and get approval of GSA first. For this, they need to submit a sample of goods, along with conformance certificate obtained from a laboratory in the country of export. Labeling requirements are also checked along with physical verification, followed by huge fees for registering number of HRGs. Kenya too has number of requirements which are complicated, expensive and non-transparent such as in case of imports of meat, dairy and poultry goods, along with standardized sanitary certification and no objection letter from its Department of Veterinary Services. In particular, all the importers in the country need to pay import declaration fee (which is 2.25% of import value) with documents, else their goods are liable to be rejected or prone to extra inspection. Subsequently, importers need to get Import Standardization Mark for each imported item based on national standards. Other NTBs are in case of Uganda's toys (wheeled toys, dolls, etc.) sector, where strict safety and quality standards are enforced upon products to be sold in the domestic market, which can create further barriers.

In mining/oil and gas sectors, Nigeria since 2010 imposes discriminatory treatment where Nigerian investors are given preference over the foreign bidders on the basis of meeting local content requirements. Thus, there are barriers to investment in African countries. For instance, Nigeria and Ethiopia practice significant foreign exchange controls, mainly in the case of the latter where foreign exchange permits are required for imports and exports, plus there are foreign exchange shortages in the country which causes delays. Foreign companies also need to register themselves with Investment Promotion Commissions/Centres such as in Nigeria, Ghana, etc. Nigeria's investments climate is significantly affected by huge intervention by government in terms of corruption and restrictions on foreign exchanges as well as continuous changes in regulations, weak infrastructure mainly power, and lack of finance access for small and medium enterprises along with number of social sector drawbacks. The process to acquire land in Kenya is cumbersome and non-transparent. In fact, in 2010, foreigners were prohibited to get freehold land titles in Kenya (only leasehold ones were allowed). Investors also face issues of fake or multiple titles due to complex procedures for land transactions, inadequate urban planning as well as under-investment in land demarcation.

Due to local content requirements (LCR) and sector-specific laws, investment in Angola is barred in petroleum, diamonds and financial services, subject to conditions sector-wise (such as forming joint ventures (JVs) with Angolan companies and acquiring low capital goods and services from domestic market in case of petroleum sector). In the case of Ethiopia, ban is on investments in banking, insurance and micro-finance industries, with prevention in the field of retail, wholesale, and service enterprises involved in printing, restaurants, transport services, shipping, broadcasting, beauty shops, etc. However, for telecommunication and defense industries, foreign investment is allowed only in partnership with Ethiopia's government. Ghana also prescribes foreign investors to form JVs with Ghanaian partner. Investment is prohibited in Ghana's sectors of petty trading, operation of taxi and automobile rental services with fleets of lesser than 25 vehicles, lotteries, operation of beauty salons and barber shops, printing of recharge scratch cards for subscribers to telecommunications services, production

of exercise books and stationery, retail of finished pharmaceutical products, and production and supply of drinking water in sealed pouches. Ban is also on obtaining small-scale mining license for mining operations for area less than 25 acres. In the case of the oil and gas sector, there is local sourcing requirement and need for creating consortium with state enterprise to get licenses. In fact, in many African countries, state-owned enterprises (SOEs) are given preference over private firms in a number of important sectors such as telecommunications, power, banking, insurance, transport, etc. which affect the playing field for foreign investors.

Although there have been significant improvements in the IPR rules in these countries, but there still remains lack of transparency, unpredictability and stringency or loopholes in terms of enforcement and protection. Capacity is limited with unnecessary delays in infringement cases, and also coordination becomes difficult among various governmental units such as in case of Ethiopia and Ghana. There is still widespread trading in counterfeit and pirated goods.

#### **4.3 Barriers to India-Asia bilateral trade and investment**

Asian LDCs (in South and South-East Asia) tend to have limited availability of capital, poor infrastructure (including bad roads, absence of adequate railway or port networks, power shortage), more of unorganized and small enterprises, etc. Many of them are still agrarian economies or continue to be rich in raw materials and resources. For instance, Myanmar has rich mineral and energy resources, Cambodia has abundant reserves of iron ore, manganese etc. (Exim Bank, 2014), which inhibits the integration of their economies in regional and global value chains, most of which are in the manufacturing sector.

Even so, many Asian LDCs including Bhutan, Nepal, and Bangladesh either enjoy preferential treatment into India or have signed free trade agreements. But they still have limited access to the penetration of technologies; their entire manufacturing line is not well-developed except in a few sectors such as apparels in the case of Bangladesh; they are afflicted by lack of trained and skilled manpower, etc. (KPMG & DFID, 2016 for Bangladesh). This prevents their linkages with other Asian countries including India who can help them in meeting infrastructure requirements, sharing of best practices for instance in setting up of SME clusters, etc. (Exim Bank, 2014). Some of the barriers between India and Asian LDCs are summarized as follows:

- a) Although Asian LDCs are geographically closer to India, especially Bangladesh, Nepal and Myanmar, they continue to face issues of connectivity<sup>9</sup> and/or disturbed border trade or weak border-related infrastructure. Illustratively, most of the bilateral trade between India and Bangladesh is carried through land, viz. using trucks mainly through land custom stations (LCS) and integrated check posts along the border. But there is significant unofficial or informal trade which tends to underestimate the actual trade

---

<sup>9</sup> In terms of railway and waterways network between India and Bangladesh, there are issues of poor connectivity such as absence of proper water transport infrastructure. As per Exim Bank (2015), “India’s National Waterways 2 (NW 2), cutting across Bangladesh, links the NER with West Bengal. The absence of all-weather navigation facilities, coupled with inadequate water depth, obstructs high-speed vessels from passing through national waterways, so these waterways can make little contribution towards enhancing merchandise trade between the two countries.” and “Bangladeshi locomotives are unable to haul air-braked freight wagons used by India, and are restricted to BCX wagons (covered, vacuum braked eight-wheeler wagons); holding capacity of loops, yards and terminals are inadequate on the Bangladesh side, even at the current low volume of traffic; container traffic and open wagons are currently restricted by Bangladesh Railway; speed of freight trains is impeded by mechanical signaling.”

potential. LCS even lack proper services in terms of power back up, internet connectivity, working hours of operational personnel, etc. which must be upgraded (Exim Bank, 2015). Four Border Haats are however currently operational to curb informal trade between India-Bangladesh. There is more need of such efforts in the case of India and Myanmar border trade. The road near their border is in bad shape which makes connectivity between the nations problematic (Exim Bank 2018a). There are currently challenges at LCS, such as, at LCS Moreh in terms of absence of operational warehousing and storage facilities, lack of internet connection, electricity issues, manual handing of goods, and lack of laboratory testing facility for imported food items, etc. All this acts as a hurdle in smooth border trade between Myanmar and India.

- b) India's trade with ASEAN has been rising particularly after signing of free trade agreement in 2009 which has led to development of some production networks in sectors of electronics and automobiles, etc. But still India's trade and investment linkages are more with Indonesia, Thailand and Singapore, rather than with LDCs such as Lao PDR, Cambodia, etc. Regarding investments, it is found that "despite being an emerging economy in Asia, India accounted for a measly three percent of ASEAN's total FDI from 2003 to 2016, and two percent of CLMV's"<sup>10</sup>. The reasons could include more dependence by Asian LDCs on China and developing/developed ASEAN. The connections therefore get limited with India who also has been focusing more on EU and US markets. Challenges remain in trading with ASEAN LDCs/CMLVs in terms of NTBs (such as stringent safety and health regulations or technical barriers), poor physical connectivity, lack of reliable power supply, weak quality and coverage of infrastructure; inadequate level of liberalization of services trade (Bhogal, 2018; Mazumdar, 2017; Assocham, 2016; Exim Bank, 2014; Dixit, 2015; etc.).
- c) Some Asian LDCs prefer sourcing from other Asian countries than India which is another main cause of lower imports and FDI coming from India. For instance, while India imports garments from Bangladesh, the latter imports fabrics mainly from China and converts them to garments for selling to India at duty-free rates (Gupta, 2018). This is because Bangladesh's readymade garments sector is more developed than that of India owing to low manufacturing costs, higher investment cap in MSMEs as well as preferential access in EU and US markets (Exim Bank, 2015).
- d) Restrictions under internal laws and policies of LDCs to attract FDI act as another obstacle. Despite liberal FDI reforms in some Asian LDCs in recent times, they are still underperforming. For instance, "Bangladesh has a welcoming stance towards FDI. Despite that, its FDI which has been increasing over the years, has still not grown in accordance with the flow in other low-income countries." (DFID & KPMG, 2016). The limited scope and coverage mentioned under Bangladeshi Foreign Private Investment Promotion and Protection Act (FPIPPA) is said to be the reason along with negative attitude towards welcoming FDI in high-performing garments, pharma and telecom sectors (UNCTAD, 2013).

#### **4.4 General Barriers in India: products and regulations**

India imposes a number of tariffs and NTBs, including TBT and SPS measures, which restrict exporters, including from Africa and Asia, in supplying easily to India. India's tariff rates on several items are very high such as 50% or more on motorcycles, flowers, rubber, automobiles, etc. and even more than 100% in case of coffee and alcoholic beverages. For agricultural goods

---

<sup>10</sup> CLMV is Cambodia, Laos, Myanmar and Vietnam.

mainly processed ones, tariff changes at any time impact the exporters, such as, import duties had increased (during November 2017-March 2018 period) from almost nil to about 30-50% or more on chickpeas, peas, lentils, etc. In 2018, tariffs were raised on some fruit juices, edible vegetable oils, etc. India increased custom duties on textile and clothing products after introduction of Goods and Services Tax (GST) in 2017, particularly on those imported from the EU. India has been continuously increasing custom duties on ICT and telecom products, affecting imports of mobile phones and their components, static converters, base stations, and printers. In September 2018, India also increased duties on imports of non-essential items including polished diamonds, gemstones and jewellery, as well as electronics goods such as AC, refrigerators, washing machines, speakers; radial car tyres, and many household and office items made of plastics.

India also bans imports of furskins, reptile leather, tanned mink skins, etc. since 2017 owing to protection of wildlife (subject to prior consultations). In the case of agriculture and fisheries sectors, India imposes SPS measures which restricts imports of plant and its products relating to fumigation treatments (for alternatives to methyl bromide). On imports of dairy products, India puts condition that animals providing such products must not consume feeds that contain internal organs, blood meal, tissues, etc.

On a number of products, namely, electronics and telecom equipment, solar power plants, iron and steel, medical devices, there are measures introduced based on certain local content and value addition requirements, i.e., give preference to domestically manufactured goods in government procurements. Such measures have heightened particularly after launching of ‘Make in India’ initiative by the Government of India in 2015.

Other significant NTBs include: (i) Restrictions on import of ethanol (ban for fuel use since 2018) via its tendering system which sets blending of ethanol from indigenous feedstock with transport fuel. (ii) Controlling of prices of medical devices such as cardiac stents, knee transplants, etc. without much consideration to technological innovations which restricts access of many countries to India. Exports of refurbished medical devices are also prohibited.

Although imports of second-hand capital goods are allowed in India, the import licenses are required in case of remanufactured goods which is again a lengthy procedure. As per USTR (2019), “Refurbished computer spare parts can only be imported if an Indian chartered engineer certifies that the equipment retains at least 80 percent of designed operating life, while refurbished computer parts from domestic sources are not subject to this requirement. India subjects boric acid imports to stringent restrictions.”

To summarize, India bans import of items of animal origin; restricts items related to livestock, chemicals, etc. which need license; but allows those which can be imported only by government and with cabinet approval such as medicines. Moreover, there are number of export subsidy programs in India for encouraging exports of its textiles and apparel, steel, paper, rubber, leather products, etc. which are being questioned by the US in particular. On the other side too, India has been levying export duties, since 2011, on the raw and semi-finished steel products and iron ore, raw hides and skins and certain semi-finished leather, followed by chromium and aluminum ores.

There are standards and other technical requirements as well as certification and registration procedures in the field of telecom equipment, cosmetics, wines and spirits, automotive, leather, steel, etc. (mainly since 2016). Concerns relate to deviation from international standards and

following in-country standards or schemes which may lack reliability as desired by certain countries. For instance, along with higher import duties, India has introduced number of standards for automotive manufacturing items (i.e. motor cars) and also placed mandatory certification for pneumatic tyres - much of these do not comply with the UNECE Agreement. However, over the years, requirements have risen for importers in terms of additional burden for fees, lengthy procedures, factory inspections, short validity of licences, and introduction of license marking scheme which are not notified to the WTO as a TBT. As per Department of Telecommunications, Government of India, all telecom equipment including mobile devices are required to undergo prior mandatory testing and certification<sup>11</sup> by Bureau of Indian Standards (BIS) even if the product is already internationally certified. There are concerns relating to rise in costs and delays for companies due to complex and long registration process, along with doubts over availability of suitable Indian laboratories for such purpose. Such in-country testing is also risky in the case of Highly Specialized Equipment (HSE) which include servers, printers, etc. requiring professionals to install and operate. Further, there are conditions attached for re-exporting within the stipulated time in terms of duty-free imports for repairs or testing (for electronic goods including mobile phones, colour TV, Xerox/ printing machines, LCD/LED panels, and certain medical devices).

In case of cosmetics sector (HS 33-essential oils, perfumery and cosmetics), there is complex registration process for importers with rising fees which has become US\$2000 for each brand plus extra fee as per variants. Domestic companies are eligible for application for perpetual licensing, unlike those products which are imported. Importers also face issues while becoming associated with national standards (which are also not found much in line with ISO). Moreover, India has also prohibited imports of animal-tested cosmetics. In 2018, the food safety standards were mentioned by Food Safety and Standards Authority of India (FSSAI) for distilled alcoholic beverages, wine and beer. However, this also concerns many exporters in terms of technical specifications such as content of alcohol and sugar to be incorporated which are mostly not as per international standards making it difficult for foreign companies to enter into India, followed by strict labeling requirements for prepackaged foods to list information on place of manufacturing/processing/storing or even residue of additives in the product. Without notifying to WTO as a possible TBT measure, Government also introduced in-country testing requirement for imported toys since 2017. While importing finished leather products, trade authorities in India also require veterinary certificates.

Above all, huge worries have been raised over India's complex custom procedures which still needs extensive documentation for clearance, plagued with uncertain and complex tariff structure. It is mentioned that "India's valuation procedures allow Indian customs officials to reject the declared transaction value of an import when a sale is deemed to involve a lower price than the ordinary competitive price, effectively raising the cost of exporting to India beyond applied tariff rates." (USTR, 2019).

India's IPR regime has issues relating to enforcements and stability due to continuous inadequate actions by IPR authorities in fighting against infringements. Inventors have mentioned problems in securing patents protection in India owing to certain flaws in IPR laws in terms of too restrictive criteria for patentability or too broad criteria to grant compulsory licences; lack of proper system to protect undisclosed test or data, in the field of pharmaceutical and agricultural chemical products, which are meant to get market approval against unfair

commercial use. Furthermore, India already has strong presence in many services sector, thereby it prohibits foreign entry in legal services, and restriction in case of financial and insurance services and in retail. India also puts several data localization requirements to restrict digital trade.

#### **4.5 General Barriers in selected Asian countries: products and regulations**

There are several sector- and country-specific barriers in Asian LDCs that prevent Indian firms from exporting to and investing in those countries, and their firms in turn from integrating into value chains, including with India. Myanmar mainly bans imports of certain goods, such as, narcotic drugs, playing cards, antiques, endangered species, counterfeit money and goods, arms and ammunitions, etc. This country still imposes import licenses on more than 4000 items, for entering into the country, including agricultural products mainly meat. Laos too put licenses on products of motor vehicles, refined petroleum fuels, oil, natural gas, timber and so on. The custom clearing and valuation processes of many of selected Asian LDCs are criticized on the ground of following non-transparent, irregular and arbitrary practices along with corruption. In the case of Myanmar, there are additional requirements for testing and inspections of shipments (not much in line with internationals standards for inspection) when agricultural products are imported, besides laboratory testing done during the process of approval of licenses.

Complex paperwork is involved in Cambodia, as reported, which causes delays in processing faced by both domestic and foreign businesses (duties also tend to change on the same kind of products shipped at different times in a year). Bangladesh largely puts registration requirement with the Chief Controller of Imports and Exports in its Ministry of Commerce on commercial importers and private industrial consumers. Further, all exporters and importers in Bangladesh need to be a member of recognized chamber of commerce or trade organization. Most importantly, Letter of Credit (LOC) is required for almost all the imports (except machinery and raw materials meant for industrial use), along with its authorization form, bill of lading, packing list, certification of origin, and import permits in case of health or security matters. With respect to SPS measures, Bangladesh places fumigation requirement on imported US Cotton at the entry port. Myanmar has also introduced more product labeling requirements for consumer goods since 2018, where some information needs to be translated into Burmese language too (USTR, 2019). On the other hand, Bangladesh provides export subsidies to certain exporters; however also ban exports in sectors like leather (European Commission, n.d.), such as on exports of raw hides and skins since 1990s which is still active (only finished leather is allowed to be exported).

In the services sector too, a number of hurdles are faced, such as foreign companies are generally prohibited in Bangladesh in those services which are reserved for government sector. Telecommunication, banking and insurance services are generally more regulated in Bangladesh thereby placing number of restrictions on new service providers in terms of equity share, having local partners, or getting license from government. In Laos' financial, medical, postal, telecommunications, leasing, media, transportation services, etc. there are issues in providing services by foreign companies. These two countries also impose barriers on digital trade and electronic commerce in terms of challenges for internet platforms which are dependent on user-generated content.

A challenging investment climate prevails in almost all Asian LDCs due to a number of reasons. To illustrate, foreign investors face issues in Bangladesh relating to administrative formalities and bureaucratic inefficiencies with frequent transfers of government officials,

corruption, as well as non-transparent as well as overlapping regulatory frameworks. For Laos too, some of the reasons are the same but with focus on weak judicial system, lack of finance services to support, complications while enforcing contracts, and varying requirements for ownership and partnerships which are generally inconsistent with administrative procedures. Investors in Myanmar and Cambodia are reportedly facing issues of lack of required finance and infrastructure, high electricity costs, rising logistics and transport costs, lack of skilled man force, and protection of minority investors (in case of Myanmar). In particular, Myanmar had issued negative list for investments in 2017 which prohibited investors to enter in certain sectors or allowed only domestic investments. However, “in May 2018, Burma’s Ministry of Commerce opened the retail and wholesale sectors for permitted products to foreign-owned companies and joint ventures that meet minimum capital requirements. The full list of permitted products was published in July 2018 and includes consumer goods, agricultural products, household and kitchen goods, pharmaceuticals, electronics, machinery, and motor vehicle parts, among other products.” (USTR, 2019).

Meanwhile, Cambodia continues to place a number of restrictions on foreign-owned land and buildings. Although many new laws and regulations are coming up in these countries for allowing foreign companies, but challenges continue in terms of implementation such as in case of Myanmar. Cambodia although allows 100% foreign investment in number of sectors but still places equity restrictions in case of movie production, rice milling, gemstone processing, publishing and printing, radio and television, wood and stone carving production, and silk weaving. Investors also face long and unpredictable government’s tax procedure or more favouring of local investors or industry over foreign ones. For better protection of IPRs, there are number of steps being taken in Laos, Bangladesh and Cambodia, including those with the assistance of the US government. But there are concerns relating to low public awareness for use of counterfeit and pirated goods. Bangladesh is reported to still have limited resources for IPR enforcement (USTR, 2019).

## CHAPTER 5

### Mapping merchandise exports of Africa and Asia in India

This chapter details the top commodities at the HS 6-digit level imported by India from select African (33) and Asian (8) countries. The data have been sourced from UN Comtrade using mirrored data. In order to study the evolution of India's merchandise imports from these countries over time, two time periods have been considered and have been averaged over three-year periods from 2010 to 2012 and 2015 to 2017 to minimize the effect of fluctuations in data reporting practices and to account for macroeconomic and other external shocks that may affect trade.

UN Comtrade covers all the 41 countries examined in this study: Angola, Benin, Burkina Faso, Burundi, Central African Republic, Chad, Democratic Republic of Congo, Djibouti, Eritrea, Ethiopia, Gambia, Ghana, Guinea, Guinea-Bissau, Kenya, Lesotho, Liberia, Madagascar, Malawi, Mali, Mauritania, Mozambique, Niger, Nigeria, Rwanda, Senegal, Sierra Leone, Somalia, Sudan, Togo, Uganda, Tanzania, Zambia, Bangladesh, Bhutan, Cambodia, Laos, Myanmar, Nepal, Timor-Leste and Yemen.

In terms of structure, the chapter reports data on total merchandise imports by India from these 41 countries averaged over 3 years from 2010 to 2012 and 2015 to 2017 (Table 5.1) as well as data on the top three African and top five Asian commodities imported by India from these countries, again averaged over the same time periods (Table 5.2). The chapter also reports the top five commodities imported by India from the Rest of the World (ROW) but not from the select African or Asian countries under study in 2015-2017 (avg.) (Table 5.3) to illustrate products where there is demand in the Indian market but possible supply side constraints on the side of the exporting countries.

#### 5.1 India's total merchandise imports from selected countries

An analysis of the data reported in Table 5.1 provides the following key results:

##### 1. Top African countries from where India imported during 2010-2012

Nigeria (USD 12.6 billion), Angola (USD 6.3 billion), Tanzania (USD 432 million), Ghana (USD 343 million), Senegal (USD 339 million), Guinea (USD 334 million), Benin (USD 256 million), Guinea- Bissau (USD 228 million), Sudan (USD 179 million), and Zambia (USD 173 million)

##### 2. Top African countries from where India imported during 2015-2017

Nigeria (USD 8.7 billion), Angola (USD 3.2 billion), Ghana (USD 2.5 billion), Zambia (USD 698 million), Mozambique (USD 586 million), Guinea (USD 454 million), Senegal (USD 371 million), Burkina Faso (USD 366 million), Sudan (USD 278 million), and Benin (USD 236 million)

##### 3. Top Asian countries from where India imported during 2010-2012

Yemen (USD 1.3 billion), Myanmar (USD 1.3 billion), Bangladesh (USD 533 million), and Nepal (USD 468 million)

##### 4. Top Asian countries from where India imported during 2015-2017

Myanmar (USD 996 million), Bangladesh (USD 690 million), Nepal (USD 460 million), and Laos (USD 217 million)

Column 4 of Table 5.1 reports the difference in value of merchandise imports of India from the select African and Asian countries between 2010-2012 (avg.) and 2015-2017 (avg.) to see whether India's imports from them have increased or declined (as highlighted in the Table 5.1) over the two time-periods. The results show that India's imports actually declined in the case of seven African countries, namely, Angola, Benin, Central African Republic, Guinea-Bissau, Kenya, Niger, and Nigeria, as well in the case of five Asian countries, namely, Bhutan, Myanmar, Nepal, Timor-Leste and Yemen.

To elaborate, imports decreased majorly for Nigeria (by \$3.9 billion) and Angola (by \$3.1 billion) from 2010-12 to 2015-17. However, both countries continue to dominate the Indian market as the top two African countries from where India has been importing goods. Secondly, Tanzania and Ghana were the third and the fourth largest exporters of merchandise to India during 2010-12, but the former is not listed amongst the top 10 countries during 2015-17 despite a rise in India's imports from it. Notably, India's merchandise imports from Ghana have increased by more than 7 times over the two time-periods (keeping the country still as the third largest exporter). Zambia has climbed the ladder with a rise in its exports to India, reaching the fourth position amongst the top countries during 2015-17. New entries in the top 10 during 2015-17 as compared to 2010-12 have been Mozambique and Burkina Faso.

In the case of Asian LDCs, although Yemen was the top country from where India imported much during 2010-12, that country has now lost the position with a major fall in (India's) import value by \$1.15 billion. In fact, India's imports from all Asian LDCs, except from Bangladesh, Cambodia and Laos, have declined though the difference is not as large as Yemen. For instance, Myanmar's exports have reduced by almost \$297 million despite it being the top Asian country in our sample during 2015-17. On the other hand, Nepal's position improved from fourth to third over time even though it witnessed a slight fall in (India's) imports value by \$7.6 million. Bangladesh too experienced a rise in ranking to the second position during 2015-17 accompanied by a rise in (India's) imports value by \$156 million.

Meanwhile, India imported the least in both the two time-periods from Burundi, Central African Republic and Rwanda (in case of selected Africa) and Cambodia and Timor-Leste (in case of selected Asia).

## 5.2 Top commodities imported by India from selected countries

An analysis of the data reported in Table 5.2 provides the following key results:

**1. Top commodities imported from African countries (2010-2012)**

Petroleum oils, cashew nuts, ferrous and aluminium waste, wood, cotton, manganese and copper ores, oil seeds, wood, photographic flashlight, wrist watches, cathodes, tanned/crust skin of sheep/lamb, precious stones, iron ores, kidney beans, coal, wool, cocoa beans, cloven, natural gas, sesamum seeds, and dried leguminous vegetables

**2. Top commodities imported from African countries (2015-2017)**

Petroleum oils, cashew nuts, gold, diamonds, copper ores, iron ores, coal, unwrought lead, natural gas, sesamum seeds, phosphoric seeds, cloves, tankers and dried leguminous vegetables

**3. Top commodities imported from Asian countries (2010-2012)**

Jute, fish, nuts, ferro-silicon, copper wire, palm oil, natural rubber, trousers, wood, beans, copper ores, petroleum oil, natural gas, and non-alcoholic beverages

**4. Top commodities imported from Asian countries (2015-2017)**

Jute, gold, beans, natural gas, nuts, non-alcoholic beverages, ferro-silicon, petroleum oil, and copper ores

Thus, India largely imports a number of agricultural products, mineral ores, petroleum oils, and some precious metals from the selected African and Asian countries though the import basket from both sets of countries seems to be more concentrated during 2015-17. The absence of some prominent items, including labour-intensive ones, in the list of top commodities imported may be attributed to India's ban on imports of items of leather and those of animal origin. India also puts a number of import restrictions and/or high tariff rates on electronic and ICT goods, machinery items, plastic articles, automobiles, alcoholic beverages, coffee, steel, cosmetics, pharmaceutical products (many of these also have been subjected to huge certification and testing requirements by India if they are to be imported). This, together with supply side constraints in the sample countries, could be the reason for the continuous low diversification of these countries' export basket to India.

Detailed tables are included in 'Annexure A' for each of the 41 countries highlighting the top 10 products imported by India (with their shares in India's imports) as well as India's imports of that commodity from ROW to show the importance of each product in the Indian market. Colour coding is used to highlight those products which are covered under India's duty-free preference scheme given for LDCs<sup>12</sup> – orange coded indicates products covered in the list of duty-free imports, while purple ones indicate those covered in the Margin of Preferences list (products in bold are not covered under the scheme). A look at the data reported in the Annex

---

<sup>12</sup> To highlight the products covered under the DFTP scheme for the time period 2010-2012, those countries have been considered which had joined till 2012. These include Benin, Burkina Faso, Burundi, Central African Republic, Eritrea, Ethiopia, Gambia, Lesotho, Liberia, Madagascar, Malawi, Mali, Mozambique, Rwanda, Senegal, Somalia, Sudan, Uganda, Tanzania, Zambia, Bangladesh, Cambodia, Timor-Leste, Lao PDR and Myanmar. The top ten commodities imported by India during 2010-2012 (avg.) and 2015-2017 (avg.), reported in Annex A, have been highlighted in different colours according to whether they belong to the exclusion list (where no tariff concessions are given), Margin of Preference (MOP) list (some tariff concession is given) or if they are under the duty-free list. This coding is not done for both the years in case of Angola, Bhutan, Congo, Djibouti, Ghana, Kenya, Mauritania, Nepal, Nigeria, and Sierra Leone, and for 2010-12 in the case of Chad, Guinea, Niger, Togo and Yemen, as these countries are still ineligible for India's preference scheme.

tables suggests that some countries may have benefitted more from India's tariff preferences given under the DFTP, for instance Central African Republic, Eritrea, Ethiopia, Madagascar, Mozambique, Tanzania, Laos and Myanmar.

Getting back to Tables 5.1 and 5.2, out of the selected 33 African countries, the top three sources for India's imports during 2010-12 were Nigeria, Angola and Tanzania, and in 2015-17, these included Nigeria, Angola and Ghana. Moreover, the shares of Nigeria's top three commodities in India's total merchandise imports during 2010-2012 and 2015-2017 were 98.7% and 98.4%, respectively, of which petroleum oil alone stood at 94.6% and 88% respectively. Other major commodities imported by India from Nigeria over the two time periods include natural gas, cashew nuts, aluminum waste and alloys, unwrought lead, and wood.

Analogous to Nigeria, the shares of Angola's top three commodities in India's total merchandise imports over the two time periods were 99.9% and 99.4% respectively; with the respective shares of petroleum oil alone being 99.2% and 82%. In contrast, Ghana's top commodity imported by India in 2015-2017 was gold (91% of India's total merchandise imports) as opposed to the top imports of cashew nuts during 2010-12 (with a share of 29% in India's imports which declined to just 3.2% in 2015-17). Meanwhile, Tanzania too exported cashew nuts and gold to India, along with dried leguminous vegetables in both the periods, but the combined share of the first two products increased from 52.4% to 82.2% over the two time periods.

In both these time periods, India imported the least from Central African Republic and Rwanda. While the value of India's merchandise imports from the former showed a decline from \$2.14 million in 2010-12 to \$1.64 million in 2015-17, India's imports from Rwanda displayed an increase of \$2 million. The top commodity imported by India in 2010-12 from Central African Republic in 2010-2012 was topical wood (47.3% of India's merchandise imports) but the share of this product declined to 12% in 2015-2017 and the top imported commodity became diamonds with a share of 58.4% in India's total imports. In the case of Rwanda, the top commodities imported by India in 2010-2012 and 2015-2017, respectively were coffee (29.8% of India's merchandise imports) and unwrought lead (47.8%).

In the case of the Asian LDCs, the top three sources of India's merchandise imports in 2010-2012 were Yemen, Myanmar and Bangladesh, whereas in 2015-17 these were Myanmar, Bangladesh, and Nepal. Commodity-wise imports' data provides some interesting results. Illustratively, in the case of Myanmar, the share of beans (urad, mung, black or green gram - HS 071331) and dried leguminous vegetables in India's total imports increased from 40% in 2010-12 to 65% in 2015-17, respectively. Meanwhile, kidney beans (0.6%), human hair (0.5%), petroleum oils (0.4%) (during 2010-2012), and chickpeas (1.5%), ferro-nickel (1.3%), nuts (1.2%) (2015-2017) were the least preferred commodities imported from Myanmar by India (please refer to Annex A tables for more details).

In the case of Bangladesh, it is evident that the share of jute and other textiles in India's total merchandise imports declined from 13.3% in 2010-2012 to 8.8% in 2015-2017, despite this being the top imported commodity. Sacks and bags (10.6%) was another item of India's import interest in both these periods, but its share too declined recently. In fact, during 2015-17, men's/boy's trousers (7% share) and jute yarn (6.5%) came to occupy the second and third positions among the top 5 commodities imported by India from Bangladesh. Fish was also a major import during 2010-12, but not in 2015-17.

Meanwhile, India imported the least from Cambodia and Timor-Leste in both the time periods. While the value of merchandise imports from the latter declined significantly from \$13 million in 2010-12 to just \$0.22 million in 2015-17, Cambodia showed an increase in value by a substantial margin of \$40 million. The top commodity imported from Timor-Leste in 2010-2012 was commodities not specified (HS 999999) (82%), whereas in 2015-2017, the market has become product-specific with imports of nuts (43.4% in India's total imports). Similarly, in the case of Cambodia, the top commodity imported by India in 2010-2012 was palm oil (34.6%), but in 2015-2017, topical wood and natural rubber shared the top positions with almost equal shares (14%).

### 5.3 India's top merchandise imports exclusively from rest of the world

An analysis of the detailed data reported in Annex A tables reveals that India imports positive values of the top 10 commodities at the HS 6-digit level (of every African and Asian country in the study) from the Rest of World (ROW), though the magnitudes differ considerably. To summarize, India's global merchandise imports are generally concentrated in petroleum oils (270900), gold (710812), diamonds (710231), coal (270119), parts of telephone sets (851770), natural Gas, liquefied (271111), palm oil, crude (151110), telephones for cellular networks (851712) and commodities not specified (999999).

However, at the level of the individual African and Asian countries included in this study, there are specific products where the concerned country does not export at all to India. These

sectors/products are reported in Table 5.3 for the years 2015-2017 (avg.) to illustrate cases where there is demand in the Indian market but possible supply side constraints on the side of the exporting countries. This said, India also imposes high import duties on some of the products mentioned in the table such as diamonds, along with mandatory testing and certification requirements for telecommunication equipment mainly telephone sets. But the main reason why India imports these products from RoW in significant amounts but not at all from the selected countries is very likely the presence of supply-side constraints in that particular country and sector. These constraints have been reported in the literature as more severe in the case of a number of African economies mainly LDCs.

Note that Table 5.3 reports information for all the 41 countries with selected products/sectors where such a supply-side constraint may exist, i.e., where India's imports from ROW are significantly positive but those from the concerned country are zero.

**Table 5.3: India imports from ROW but not from selected 41 countries (2015-2017)**

## CHAPTER 6

### Mapping services exports of Africa and Asia in India

Analogous to the analysis for goods, this chapter details the top services exported by select African (31) and Asian (7) countries to India. The data have been sourced from the OECD-WTO BaTIS (“Balanced Trade in Services”) database and cover eleven services sectors namely, transportation; travel; communication services; construction; insurance services; financial services; computer and information services; royalties and license fees; other business services (OBS); and personal, cultural and recreational services. In order to study the evolution of these countries’ services exports to India over time, two time-periods have been considered - 2000-02 and 2010-12 - and the data have been averaged over these three year time periods to minimize the effect of fluctuations in data reporting practices and to account for macroeconomic and other external shocks.

While 2012 is the last year for which BaTIS reports these data, the analysis in this report still constitutes significant value-added relative to existing literature, given the absence of more recent bilateral and sectoral services trade data for the countries covered in this study. Direct exports are used in the case of services trade analysis as the final balanced value of both exports and imports is reported in this database.

BaTIS covers 38 of the 41 countries examined in this study: Angola, Benin, Burkina Faso, Burundi, Central African Republic, Chad, Democratic Republic of Congo, Djibouti, Ethiopia, Gambia, Ghana, Guinea, Guinea-Bissau, Kenya, Lesotho, Liberia, Madagascar, Malawi, Mali, Mauritania, Mozambique, Niger, Nigeria, Rwanda, Senegal, Sierra Leone, Sudan, Togo, Uganda, Tanzania, Zambia, Bangladesh, Bhutan, Cambodia, Laos, Myanmar, Nepal and Yemen. Unfortunately, data are not available for three countries, namely, Eritrea, Somalia and Timor-Leste.

The data in this chapter are arranged as follows. Table 6.1 reports data on total services exported to India by these 38 countries averaged over 3 years from 2000 to 2002 and 2010 to 2012. Table 6.2 reports data on the top two services exported to India by these countries, again averaged over the same time periods. Table 6.3 reports the services imported by India from the Rest of the World (ROW) but not from the selected African or Asian countries under study in 2010-2012 (avg.) to illustrate cases where there is demand in the Indian market but possible supply side constraints on the side of the exporting countries.

#### **6.1 Total services exports of Africa and Asia to India**

The results for selected African and Asian countries based on an analysis of data reported in Table 6.1 are as follows:

- 1. Top African countries which exported to India during 2000-2002**  
Nigeria (USD 82 million), Liberia (USD 38 million), Senegal (USD 36 million), Tanzania (USD 34 million), and Kenya (USD 30 million)
  
- 2. Top African countries which exported to India during 2010-2012**  
Nigeria (USD 542 million), Angola (USD 364 million), Senegal (USD 141 million), Kenya (USD 130 million), and Tanzania (128 million)

**3. Top Asian countries which exported to India during 2000-2002**

Nepal (USD 61 million), Myanmar (USD 23 million), Yemen (USD 15 million), Bangladesh (USD 13 million), and Bhutan (USD 9 million)

**4. Top Asian countries which exported to India during 2010-2012**

Nepal (USD 183 million), Yemen (USD 131 million), Myanmar (USD 104 million), Bangladesh (USD 86 million), and Bhutan (USD 59 million)

The value of services exported to India by the African and Asian countries covered in this study export is much lower than that of their merchandise exports to India. However, unlike merchandise exports where some countries have shown a decline in the value of their exports to India over time, the value of total services exported to India by all the selected African and Asian countries in this study have increased over the period 2000-02 and 2010-12 (see Column 4 of Table 6.1). The table also highlights those countries that have experienced the highest growth in the value of their services exports to India between the two time-periods. In the case of Africa, these countries include Nigeria (rise in value by \$460 million), Angola (by \$361 million), and Senegal (\$105 million), while in the case of Asia, these countries include Nepal (\$122 million), Yemen (\$116 million), and Myanmar (\$81 million).

To elaborate, Nigeria and Nepal have retained their positions as the top African and Asian services exporters to India, respectively, in both the periods 2000-02 and 2010-12. As already stated, they have also increased the value of their services exports to India. For Africa, the second position was held by Liberia in the earlier period, followed by Senegal. Not only have their exports increased over the years, but their relative positions in the ranking of top services exporters to India has also changed. For instance, while Senegal remained the third largest services exporter to India even in 2010-12, Liberia's second position in 2000-02 was lost and replaced by Angola. This interchange also happened in the relative positions of Tanzania and Kenya in the case of Africa and between Yemen and Myanmar in the case of Asian LDCs, with a higher rise in their services export values to India. Meanwhile, Bangladesh and Bhutan have also been exporting significantly to India.

In contrast, the worst African performers in terms of services exports to India during 2000-02 (avg.) were Lesotho (with services exports of just \$.07 million), Burundi (\$0.1 million), Mauritania (\$0.17 million), Rwanda (\$0.18 million), Niger (\$0.49 million), and Malawi (\$0.64 million). Although these countries' services exports to India have risen in absolute terms from this period to 2010-12, they still lie in the bottom half of the distribution with Burundi, Lesotho and Rwanda as the lowest services exporters in the latter period.

Meanwhile, the worst Asian performers in 2000-02 were Laos (services exports to India of \$0.58 million), Cambodia (\$1.3 million), and Bhutan (\$8.8 million). By 2010-12, their services exports to India increased rapidly which is indicative of the growing India-LDCs trade relationship in the case of Asia, as also documented by existing literature on this subject. At the same time, as compared to top Asian performers, these countries still remained at the bottom rung of the services export ladder.

## 6.2 Top services exported by selected countries to India

An analysis of the data reported in Table 6.2 reveals the following:

1. **Top services exported by African countries to India (2000-2002)**  
Travel, Transportation and Government Services
2. **Top services exported by African countries to India (2010-2012)**  
Travel, Transportation and Other Business Services
3. **Top services exported by Asian countries to India (2000-2002)**  
Travel and Transportation
4. **Top services exported by Asian countries to India (2010-2012)**  
Travel and Transportation

Detailed information is reported in the tables in ‘Annex B’, which show the top ten services export sectors for each of the African and Asian country along with their values and shares, and India’s imports of services in that sector from ROW.

Table 6.2 shows that of the 31 African countries, Nigeria, Angola and Senegal were the top three services exporters to India in 2010-12 (Liberia was in place of Angola in 2000-02). Sector-wise, the share of Nigeria’s top two sectors in its total services exported to India in the two time-periods was 77% and 67.5%, respectively; the share of transportation services exports alone stood at 43% and 48%, respectively. Other services such as construction, travel, and other business services (OBS) had shares of 19.3% (34.2%), 18.1% (7%) and 11.3% (11.8%) during 2010-12 (2000-02), respectively.

The share of Senegal’s top two sectors in its total services exported to India in 2000-02 and 2010-12 was 64% and 65%, respectively; the share of travel services exports alone was about 43% and 41%, respectively. Meanwhile, Liberia’s top service exported to India has been transportation (86% of its total exports to India in 2000-02 which later declined to 82.5%). Angola’s top service in 2010-2012 was OBS (36.8% - risen from 16% during 2000-02), followed by construction whose share was almost reduced to half.

In contrast, African countries which have exported their services the least to India in both time-periods include Burundi, Lesotho and Rwanda. The top service exported by Burundi in 2000-02 was computer and information services (22.4% of its total exports), but in 2010-2012, the top sector was OBS (46%). In the case of Lesotho and Rwanda, the top services exported to India in the two time periods were travel (86% in 2000-02 and 84% in 2010-12) and financial services (whose share increased from 29% to 36% over the two periods), respectively.

In the context of the selected Asian LDCs, top services exporters to India in the two time-periods were the same - Nepal, Yemen and Myanmar. All three countries have been significant exporters of travel services to India, though the importance of the sector in total services exports to India did not change much over time. For instance, the share of travel services in Nepal’s

total services exports to India increased slightly from 71.9% in 2000-02 to 73% during 2010-12, while in the case of Yemen, the sector's share increased from 53% to 58% over the same time period. For Nepal, communication services have been the second most exported services sectors, though the sector's share in total services exports to India declined from 17% to 14% during the two periods. In the case of Yemen, government services (share of 20.7%) were the second most exported service to India in 2000-02, but in 2010-12, these were replaced by OBS (with a share of 17%). In the case of Myanmar, the share of transportation in total services exports was 49% and 46% in 2000-02 and 2010-12, respectively. There were almost similar shares in the exports of travel services to India with respective shares of 44.4% and 44.7%.

Asian countries with the lowest value of services exported to India in both the time periods included Laos, Cambodia and Bhutan. However, there was a huge rise in the absolute values of their services exports to India, with respective growth of over 5500%, 900% and 500% (from 2000-02 to 2010-12). The top service exported by all these three countries to India in both the periods was travel, except for Cambodia in 2010-2012 where the top exported service was transportation.

The reasons for these countries exporting only a limited number of services to India such as travel, transportation, government services, and even communications services and OBS can be linked to India's higher restrictions on imports of financial and insurance services, and a number of professional services such as legal, accounting, etc., followed by some barriers to entry in telecommunication services where the government still holds a major equity share. Foreign ownership limit also exists in the audio-visual and media sectors. Changes in policy, especially on FDI, could lead to a diversification of these countries' exports to India.

### 6.3 India's top services imports exclusively from rest of the world

An analysis of the detailed data reported in Annex B tables reveals that India imports positive values of all services from the Rest of the World (ROW), though the magnitudes differ considerably. This said, India's global services imports are generally concentrated in travel, transportation and OBS.

However, at the level of the individual African and Asian country included in this study, there are specific services sectors where the concerned country does not export at all to India. These sectors are reported in Table 6.3 for the recent years 2010-2012 (avg.) country-wise and are likely indicative of supply-side constraints in that particular country and sector. Note that Table 6.3 only reports those countries and sectors where such a supply-side constraint may exist i.e. where India's imports from ROW are significantly positive but those from the concerned country are zero (this was found to be the case for 15 of the 31 African countries and 6 of the 7 Asian countries).

## **CHAPTER 7**

### **Supply constraints in selected African and Asian countries**

Limited capacities in LDCs mainly of Africa, and even Asian, for supplying goods and services to India has been regarded as one of the main challenges that restrict harnessing of the full potential of their bilateral trade. From a strategic perspective, India can invest in those sectors/products/services in selected African and Asian countries which do have some growing competitiveness, as also listed in previous chapters, but also urgently need support to overcome supply constraints.

Given this, the analysis in this chapter aims to identify such sectors in the case of both goods and services segments in the concerned African and Asian countries with investment potential for India. The analysis considers those sectors (goods and services) where India's global imports exceed the concerned country's global exports as well as the associated region's (African or Asian) global exports, thus, indicating a supply constraint for that product or service in the concerned country as well as the geographical neighbourhood. Thus, the chapter looks at those goods and services for which the selected African and Asian countries may require supply capacities in order to be able to export the necessary quantities to India. Indian companies can form JVs with local companies in these countries or invest in their export projects, etc. so that the selected countries can enhance their capacity to meet the demand of the Indian market.

One major finding from the analysis undertaken in this chapter is that none of the eight Asian LDCs has a supply constraint in any of the goods and services items in either of the time periods. This is largely due to the significant effect of the Asian region's high global exports (likely due to more linkages in GVCs of South East Asian countries). Thus, although there were several goods and services where India's global imports exceeded global exports of the concerned Asian country, the former could not surpass the exports of the Asian region to the world, alluding to the existence of supply-side capacities in the immediate neighbourhood.

On the other hand, there are a number of merchandise goods followed by some services sectors in African countries where there exist quite significant supply constraints in exporting to India. Accordingly, Table 7.1 (Part A-C) reports such commodities (sectors) at the HS 2-digit level. In this table, 'E' denotes the presence of a supply constraint in the concerned country only during the earlier time-period 2010-2012 (avg.); 'B' denotes the presence of a supply constraint in the concerned country during both time periods 2010-2012 (avg.) and 2015-2017 (avg.); and 'L' denotes the presence of a supply constraint in the concerned country only in the later time period 2015-2017 (avg.). Significantly, a majority of the products with a lack of supply capacity, identified using the methodology described in Section 3.1.2 of Chapter 3 i.e. where India's global imports exceed the concerned country's global exports as well as the associated region's global exports, are almost the same across all the concerned African countries.

The products identified with supply constraints and with investment potential for India in both the time periods 2010-2012 (avg.) and 2015-2017 (avg.) include: animal or vegetable fats; organic chemicals; pharmaceutical products; fertilizers; tanning or dyeing extracts; albuminoidal substances; miscellaneous chemical products; photographic or cinematographic goods; plastics and articles thereof; rubber and articles thereof; pulp of wood or of other fibrous cellulosic material; paper and paperboard; articles of paper pulp, of paper or of paperboard;

printed books, newspapers, pictures; silk; other vegetable textile fibers; man-made filaments; man-made staple fibers; wadding, felt and nonwoven; special woven fabric; impregnated, coated, covered or laminated textile fabrics; knitted or crocheted fabrics; umbrellas, sun umbrellas, walking-sticks, seat-sticks, whips, riding-crops and parts thereof; articles of stone, plaster, cement, asbestos, mica or similar materials; ceramic products; glass and glassware; iron and steel; articles of iron or steel; lead and articles thereof; tin and articles thereof; tools, implements, cutlery, spoons ; miscellaneous articles of base metal; nuclear reactors, boilers, machinery and mechanical appliances; parts thereof; electrical machinery and equipment; railway or tramway locomotives; aircraft, spacecraft, and parts thereof; ships, boats and floating structures; optical, photographic, cinematographic, measuring, checking, precision, medical or surgical instruments and apparatus; parts and accessories thereof; clocks and watches and parts thereof; musical instruments; toys, games and sports requisite; and miscellaneous manufactured articles. Commodities with supply constraints only in the later time period 2015-17 include vegetable plaiting materials; inorganic chemicals; zinc and articles; furniture, bedding, mattresses etc.; and in the category of commodities not specified anywhere. So, there are number of manufacturing sectors where India can invest.

However, India also needs to re-work some of its import restrictions/prohibitions or lower down its tariff rates and/or reduce number of mandatory certification/registration requirements which can also help African and Asian countries to export their manufactured goods to India in a more feasible manner. For instance, India currently bans import of animal fats, puts high duties on plastic articles and essential drugs, require import licences for imports of chemicals (in fact, pharmaceutical products are mainly permitted to be imported by government trading monopolies), practices price control on medical devices, and requires complex in-country testing of toys and electronic/telecommunication equipment, as well as certification for steel products; etc. There is scope for liberalization of these sectors by India at least on a bilateral basis.

*Note:* ‘E’ denotes the presence of a supply constraint in the concerned country only during the earlier time-period 2010-2012 (avg.); ‘B’ denotes the presence of a supply constraint in the concerned country during both time periods 2010-2012 (avg.) and 2015-2017 (avg.); and ‘L’ denotes the presence of a supply constraint in the concerned country only in the later time period 2015-2017 (avg.).

The above analysis relates to likely supply constraints in the merchandise export sectors of selected African and Asian economies. This analysis is replicated to identify potential supply constraints for the same countries but in the case of their services exports to India.

Like in the case of goods, none of the eight Asian LDCs were found to have a supply constraint in any of the services sectors in either of the time periods, even though there were several services where India's global imports exceeded global exports of the concerned Asian country. This finding is again due to the effect of the Asian region's higher global exports of services, alluding to the existence of supply-side capacities in the immediate neighbourhood.

Similarly, services found to exhibit a likely lack of supply capacity are also found to be the same across all the selected African countries. Accordingly, Table 7.2 identifies services in the concerned African countries with investment potential for India. Here too, 'E' denotes the presence of a supply constraint in the concerned country only during the earlier time-period 2000-2002 (avg.); 'B' denotes the presence of a supply constraint in the concerned country during both time periods 2000-2002 (avg.) and 2010-2012 (avg.); and 'L' denotes the presence of a supply constraint in the concerned country only in the later time period 2010-2012 (avg.).

The results show that African countries' limited capacity to supply exists for five services sectors - insurance, financial, computer, royalties, and other business services (OBS). The greater prevalence of supply constraints in both time periods in Table 7.2 suggests that the more prominent sectors for India's investment in African countries include financial services and computer and information services. However, it may be noted that India too restricts imports of financial and insurance services and puts many barriers to entry for the private sector in its telecommunications sector. Meanwhile, OBS and insurance services are also integral to building supply-side capacities, but constraints in these sectors were identified only for the period of 2010-2012 (avg.) and 2000-2002 (avg.), respectively.

## **Chapter 8**

### **India's outward investment in African and Asian countries**

Over the past few decades, foreign direct investment (FDI) has grown strongly as a major form of international capital transfer. It is considered as a key element for a country's economic integration and a key source of finance particularly for many LDCs. More importantly, developing and emerging-market economies, such as India, who earlier were mere recipients of FDI have now become important investors abroad, including in a number of African as well as some Asian LDCs.

Against this background, this chapter attempts to provide a deeper understanding of India's investment in the chosen African and Asian countries during the time period from 2010 to 2018 based on data sourced from 'fDi Markets'. Note that information reported in this database only pertains to announced greenfield investment projects. The countries for which data on greenfield investment are available in fDI Markets over 2010-2018 include: Angola, Burkina Faso, Burundi, Chad, Democratic Republic of Congo, Ethiopia, Ghana, Kenya, Liberia, Madagascar, Malawi, Mozambique, Niger, Nigeria, Rwanda, Senegal, Sierra Leone, Sudan, Tanzania, Uganda, Zambia, Bangladesh, Bhutan, Cambodia, Laos, Myanmar, Nepal and Yemen (i.e., 28 countries' data available out of total selected 41).

The chapter reports data on total greenfield investment by India in the 21 African and 7 Asian countries cumulative over the time period from 2010 to 2018 in the Tables 8.1 and 8.2, respectively. Tables 8.3 and 8.4 report respective data on sector-wise distribution of total greenfield investment by India in these countries cumulative over the same time period.

#### **8.1 India's total greenfield investment in selected countries**

The key findings from the analysis of India's announced greenfield investment (from Tables 8.1 and 8.2) are as follows:

##### **1. Top 5 African host countries for Indian greenfield investment**

Mozambique (USD 6.5 billion), Nigeria (USD 2.8 billion), Ghana (USD 2.0 billion), Ethiopia (USD 1.8 billion), and Kenya (USD 1.2 billion)

##### **2. Top 5 Asian host countries for Indian greenfield investment**

Bangladesh (USD 7.5 billion), Myanmar (USD 1.5 billion), Nepal (USD 360.6 million), Bhutan (USD 354.7 million), and Yemen (USD 326.2 million)

Over the cumulative time period 2010-2018, India announced greenfield investment worth US\$19.3 billion in the selected sample of 21 African countries (see Table 8.1). Interestingly, the distribution of investment in these countries was highly skewed. Thus, the top 3 African host countries for Indian greenfield investment during 2010-18 have been Mozambique (with a cumulative value of \$6.5 billion), Nigeria (\$2.8 billion) and Ghana (\$2 billion); together these countries account for 58.9% of total Indian greenfield investment to these African countries. These countries are followed by Ethiopia, Kenya and even Zambia who have also been able to attract a fair amount of Indian greenfield investment, accounting for 9.3%, 6.3% and 4.7%, respectively, of India's total outbound greenfield investment to Africa. Thus, these six countries have together accounted for about 79% of India's total outbound greenfield investment to Africa. In the case of the remaining 15 countries, the value of greenfield

investment received has been much lower, with some countries having shares around just 3% including Liberia, Senegal and Tanzania. For others, the shares have been below 2%. The smallest recipients of Indian greenfield investment have been Burundi, Angola and Sudan with combined shares of just 0.1% (\$20 million received in value terms) in India's total outward greenfield investment in Africa. These countries thus need to urgently improve their weak investment climate by removing restrictions on a number of sectors in the form of local content requirements, and removing bar on investment in petroleum, diamonds and financial services as in the case of Angola.

In contrast, the seven Asian countries (see Table 8.2) received \$10.4 billion of cumulative greenfield investment from India during the time period 2010-18. Bangladesh received most of India's greenfield investment at \$7.5 billion, with a share of more than 70% in India's cumulative greenfield investment in these countries. The remaining six countries received 28% and within this group, Myanmar received the most at \$1.5 billion (share of 15%). India invested more than \$300 million in each of Bhutan, Yemen and Nepal (each having share of about 3%). However, Laos received the least greenfield investment from India worth \$92 million, amounting to just 0.88% of total greenfield investment by India in these seven Asian LDCs. It is reported that Lao PDR's investment climate is very challenging with weak judicial system, lack of adequate supporting financial services, etc. Cambodia too has issues related to lack of

proper infrastructure and finance with high logistics costs which hinders investment flows into the country. In fact, Cambodia puts restrictions on FDI in some sectors such as rice milling, gemstone processing, publishing, radio and television, etc. with policies to favour local investors over foreign ones. These constraints may be responsible for the stylized facts presented here.

## 8.2 India's sector-wise greenfield investment in selected countries

While selecting the top 3 sectors for India's greenfield investment in selected 21 African countries, only ten countries could report such information. These include Democratic Republic of Congo, Ethiopia, Ghana, Kenya, Mozambique, Nigeria, Rwanda, Tanzania, Uganda and Zambia (see Table 8.3). This implies that India currently invests only in one or two sectors in the other eleven countries. Thus, there may be untapped potential in these countries to attract more investment from emerging economies like India, and that too in a wider range of sectors. In contrast, except for Laos and Yemen, the top 3 sectors for India's greenfield investment in Asian LDCs could be identified easily (see Table 8.4).

Detailed tables for all 28 countries for which data are available in fDI Markets are enclosed in 'Annex C' where India's greenfield investment is reported sector-wise for each country, along with the name of the major investor company in the sector whose share in total greenfield investment is very high.

The following key results from table 8.3 portray India's sector-wise greenfield investment in the selected African countries:

- (i) Of the ten countries for which the top 3 sectors could be identified, the communication sector is found in the top 3 sectors for seven countries: Congo (\$145.7 million); Ghana (\$145 million); Kenya (\$174.8 million); Nigeria (\$979.9 million); Rwanda (\$103.7 million); Tanzania (\$108.90 million) and Uganda (\$265.6 million). Note that in the fDI Markets database, the communication sector covers two main areas, namely, communications equipment and wireless telecommunication carriers.
- (ii) Apart from the communication sector, the other top 3 sectors in these 10 African countries are: real estate (Democratic Republic of Congo, Kenya); software & IT services (Democratic Republic of Congo); textile (Ethiopia); food & tobacco (Ethiopia); paper,

printing & packaging (Ethiopia); chemical (Ghana, Nigeria, Zambia); automotive OEM (Ghana); warehousing (Kenya, Mozambique); coal, oil & gas (Mozambique, Zambia); beverages (Mozambique); non-automotive transport OEM (Nigeria, Uganda); healthcare (Rwanda, Tanzania, Uganda); pharmaceuticals (Rwanda); industrial equipment (Tanzania); and renewable energy (Zambia).

Besides these ten countries, India has also invested heavily in two main sectors of other African countries, namely, Burkina Faso, Chad, Madagascar, Malawi, Niger and Sierra Leone. Communications is one of these two sectors, followed by business services (in case of Burkina Faso, Chad, Niger); minerals (Madagascar); software & IT services (Malawi) and metals (Sierra Leone).

Interestingly, few Indian firms have solely invested in just one sector in the case of five African LDCs. These include the industrial equipment sector in Angola (\$3 million), in Burundi (healthcare - \$2.92 million), Liberia & Senegal (coal, oil & gas - \$653.4 million each), and Sudan (communications - \$94.1 million). Being resource-rich countries, Liberia and Senegal have received a good amount of capital investment from India in coal, oil & gas sector are natural, liquified & compressed gas; fossil fuel electric power; other petroleum & coal products and coal mining. In contrast, despite being amongst the top recipients of FDI in Africa, Nigeria does not have any greenfield investment in this sector owing to preferential treatment given to Nigerian investors over foreign investors. Kenya too is considering a bill on local content requirements in this sector, which may further deter foreign investment.

In fact, restrictions placed by a number of countries on investment in certain sectors could also be responsible for India's limited sectoral investment in those countries. For instance, Ghana puts investment prohibitions in the sectors of petty trading, automobile rental services, lotteries, beauty salons, printing of recharge scratch cards for telecom services subscribers, production of exercise books and stationery, retail of finished pharmaceutical products, etc. as well as bans small-scale mining license for operations on area less than 25 acres. Ethiopia bans investments in banking, insurance and micro-finance sectors, as well as restricts those involved in retail, wholesale or service enterprises such as in transport services, shipping, printing, etc. FDI in its telecommunications sector is allowed only if done in partnership with its government. This could be one reason why India has not invested in this sector of Ethiopia.

In the case of the Asian countries (see Table 8.4), the sectors are not similar unlike for the African countries. For instance, the communication sector is not among the top three sectors for a majority of the countries, except in Nepal where the sector attracted investment worth \$79.4 million. In countries like Bangladesh and Laos, in contrast, the telecommunication sector is generally highly regulated with a number of restrictions.

We find that Indian firms have invested heavily in textiles (Bangladesh); automotive OEM (Bangladesh, Cambodia); business services (Bangladesh); coal, oil and gas (Myanmar); renewable energy (Bhutan, Yemen); followed by rubber (Laos), financial services (Myanmar, Bhutan, Nepal) and even in wood products (Laos, Myanmar). India's investment in the textiles sector has only been in Bangladesh (\$2.3 billion) and Bhutan (much lower at \$18 million), which could be surprising given the potential to form regional supply chains in this sector as identified by UNCTAD, Commonwealth Secretariat and CWTO (2010).

Furthermore, India has invested in few rare sectors such as pharmaceuticals and hotels & tourism in the case of Cambodia and rubber in Laos (mainly dedicated to tyre making firms). Also, Nepal's top sector to attract Indian investment (\$103 million) has been the non-automotive transport OEM sector. Meanwhile, Myanmar's coal, oil & gas sector attracted \$1.2 billion during the time period 2010-18.

### **8.3 Analysis of trade-investment linkages**

Using the values of African and Asian countries' exports of goods and services to India for the latest available time periods - 2015-17 and 2010-12, respectively - (as reported in Annex A and B tables), this section draws their parallel linkages with India's greenfield investment in these countries. The objective is to identify, without attributing any causality, whether the sectors that export more to India are also those that are major recipients of Indian greenfield investment.<sup>13</sup> Overall, significant FDI-trade linkages could be traced between India and almost 6 African and 3 Asian countries (of the 28 countries in which India announced greenfield investment as documented in fDI Markets over 2010-2018). The links are found to be significant in the case of communications services and other business services (OBS). For

---

<sup>13</sup> It is also possible, indeed likely, that Indian investment in these countries may generate exports to third countries, but we do not examine such instances in this report as it is focused on the Indian market. This does not however imply that Indian outward investment in these countries is largely to serve demand in the Indian market and is basically resource-seeking. In fact, it would have been useful to compare the observed stylized facts against investment originating from China as well as explore the links between Indian outward investment and India's exports of goods and services to these countries. However, both these aspects are beyond the scope of this report.

commodities, prominent sectors for linkages include coal, metals, food, automotive OEM and chemicals (in the case of Africa), and textiles and wood products (in the case of Asia).

Some specific illustrations of these linkages are as follows:

- Over the period 2010-18, India's cumulative greenfield investment in Zambia in metals and automotive OEM (more than \$95 million in each case) accounted for shares of about 11% in India's total greenfield investment in that country. Zambia's exports to India are concentrated in base metals (where unrefined copper exports worth \$606 million account for 86.9% of India's total merchandise imports from that country).
- Indian firms, namely Karli International, Karuturi Global and Ruchi Group, have invested significant amounts of \$194 million cumulative over 2010-18 in Ethiopia's food & tobacco sector (with a share of 11% in India's total greenfield investment in that country). At the same time, Ethiopia's exports of various types of beans, turmeric and oil seeds to India have been significant - \$52 million, amounting to 82% of India's total merchandise imports from that country.
- India's greenfield investment in Mozambique has largely been concentrated in coal, oil & gas sector with a share of 95.7% in India's total greenfield investment in that country cumulative over 2010-18, with Bharat Petroleum investing \$6255 million. Mozambique's \$404 million exports of coal to India with a share of 68.8% in India's total merchandise imports from that country show strong linkages.
- During 2010-2018, India's ABG International invested \$150 million (with a share of 61.5%) in Sierra Leone's metal sector, particularly in aluminum's production and processing. The sector exported base metals (majorly ferrous and aluminum wastes and scrap) worth \$9.7 million to India over 2015-2017 (avg.), with a share of almost 47% in India's total merchandise imports from that country, along with exports of aluminium ores (\$3.6 million with a share of 17.5%).
- India invested \$166 million in Kenya's chemical sector cumulative over 2010-18 representing 13.6% of its total outbound greenfield investment in that country. Kenya has been a significant exporter of inorganic chemicals, i.e., disodium carbonates, to India (of \$20 million) accounting for 19% of India's total merchandise imports from that country over 2015-2017 (avg.).
- India's Bharti Group invested \$145 million in Congo's communication services sector cumulative over 2010-18 with a notable share of 73.7%. Congo exported \$5.5 million of this service to India over 2010-12 (avg.) contributing 10% of the country's total services exports to India.

In the case of Asian LDCs, greater FDI-export linkages are found between India and Bangladesh. For instance, cumulative over 2010-2018, India's Arvind Ltd. invested \$2.3 billion in Bangladesh's textiles sector with a share of 30.6% in India's total greenfield investment in that country. Meanwhile, Bangladesh exported textiles and clothing products (fibres, yarn and woven fabrics of jute, men's/boys' shirts and trousers, made-up textile items such as packaging bags) worth \$229 million to India over 2015-17 (avg.), representing 33% of India's total merchandise imports from that country. India also invested \$1000 million in Bangladesh's business sector (share of 13.4%), while the latter exports \$35 million OBS to India (share of 40.8% in that country's total services exports to India over 2010-12 (avg.)).

Other traceable linkages include (i) India's cumulative greenfield investment in Lao's wood sector (11% share) and Lao's exports to India (worth \$20 million, 9% share). (ii) India's

cumulative greenfield investment in Nepal's communications sector (25% share) and Nepal's export of communication services to India (worth \$25 million, with a share of 13.8%).

## **CHAPTER 9**

### **Quadrant analysis of goods and services**

The current level of investment by India in the selected African and Asian countries measures one set of the opportunities that have opened up between India and these countries. But how much more potential can be created and tapped, and where investment should actually be directed depends on these countries' ability to connect with India. The level of India's imports of various goods and services from countries all over the world provides an estimate of the size of the Indian market that can be penetrated by these countries. However, the extent to which these countries can access the Indian market also depends on their export competitiveness and on their capacity to produce goods and services acceptable in the Indian market. Quadrant analysis is thus used to identify these countries' goods and services exporting opportunities based on the BRCA index and export share in India's imports (as already described in Chapter 3). A higher value of the BRCA index accompanied by above-average import shares classify goods and services under Quadrant A while those with the lowest values of the two indicators are placed under Quadrant D. From a policy perspective, the focus is on Quadrant B which identifies products/services with below-average shares in Indian imports but where the exporting countries are competitive, thereby suggesting the need for proactive trade promotion.

For analysis of merchandise trade, data for all the 41 African and Asian countries are again sourced from UN Comtrade over the two time-periods 2010-12 and 2015-17. The quadrant analysis is undertaken to identify goods at a disaggregated level, i.e. the HS 6-digit level. Note that as the BRCA index and shares in India's imports are calculated using three-year averaged trade values, non-reported data are taken as zero so that shares could lie between 1-100% and BRCA (after normalization) lies between -1 to +1. For analysis of services trade, data are sourced from OECD-WTO BaTIS, which provides data for 38 countries (except Eritrea, Somalia and Timor-Leste) for the time-period 2000-02 and 2010-12.

#### **9.1 Quadrant analysis of merchandise trade**

Tables 9.1 and 9.2 report the four quadrants with count of products identified therein during the periods 2010-12 and 2015-17 for selected African and Asian countries, respectively.

##### **9.1.1 Analysis of African goods exports**

The analysis reveals that a majority of the goods at the HS 6-digit level during 2010-12 and 2015-17 for the 33 African countries belonged to Quadrants B and D (see Table 9.1). During 2010-12, the number of goods in Quadrant B were relatively higher for several countries and have subsequently declined. During 2015-17, the maximum number of goods were identified under Quadrant D (BRCA<0 and low import shares), while Quadrant C (high import shares but BRCA less than zero) continue to record the least number of goods.

The analysis reveals that few African countries have a high comparative advantage in exporting to India with significant shares in India's imports, and that too in a small number of goods as identified under Quadrant A. Kenya exported the maximum (39 goods) during 2010-12, followed by Ghana, Nigeria and Tanzania (25). However, the number of items declined for each of these during 2015-17, such as up to 16 in the case of Kenya, and from 26 to 7 in the case of Ghana, etc. Even so, during 2015-17, Tanzania recorded the maximum number of items (21) which it has been competitively exporting to India, followed by Kenya, Nigeria, Senegal

(13) and Madagascar (11). Better performing items in this quadrant (based on high shares in India's imports and greater levels of BRCA) country-wise during 2015-17 include: dried leguminous vegetable, waste or scrap of cast iron, certain essential oils, and sawn/chipped wood in case of Tanzania; tin ores and concentrates, mineral item like fluorspar, disodium carbonate (chemical), as well as trees, shrubs and bushes (whether grafted or not) in case of Kenya; iron and non-alloy steel ingots, and turmeric (curcuma) for Nigeria; chemical such as phosphoric and polyphosphoric acid, and raw skins of sheep or lambs (without wool) for Senegal; and mica waste, natural graphite (other than in powdered form), whole cloves, and dried and shelled beans in case of Madagascar. Notably, Madagascar holds over 90% share in India's total imports of mica waste. As these products identified in quadrant A already have a good demand in India, they do not require much change in policies, apart from just preventing a loss in their comparative advantage.

Quadrant B is the major focus area of this study due to identification of commodities in which the selected African and Asian countries have a competitive advantage, but with less than average shares in India's imports thereby necessitating proactive policy measures. Kenya exported the maximum number of goods, as identified under this quadrant, during both the time periods, despite a subsequent fall in the number of goods from about 250 during 2010-12 to 98 during 2015-17. Nigeria and Ghana recorded the second and third highest number of commodities, respectively, during 2010-12. But as the number of goods drastically declined for these two from 245 to 50 and from 233 to 23, respectively, the two positions were taken over by Ethiopia and Uganda during 2015-17. Other competitive countries for exports to India during 2010-12 were Tanzania, Ethiopia and Madagascar; and Nigeria, Madagascar and Tanzania during 2015-17.

For these six prominent countries identified during 2015-17 under this quadrant, majority of their exported products are found in the category of general machinery, mechanical appliances and parts (HS 84) and electric machinery/equipment and their parts (HS 85). These are followed by few common products belonging to the categories of precision machinery (optical, photographic, medical or surgical instruments) and their parts (HS 90); articles of wood (HS 44); and raw hides, skins and leather (HS 41). Further, some sectors are majorly identified across specific top countries, such as, edible vegetables and certain roots and tubers (HS 07) in case of Kenya, Ethiopia and Uganda; plastic and its articles (HS 39) and paper, paperboard and their articles (HS 48) for Kenya and Ethiopia; and copper and its articles (HS 74) in case of Nigeria and Ethiopia (Table 9.1). Interestingly, most African exports in this quadrant can be classified as raw materials and intermediate goods such as iron ores, metal wastes, plastic in primary forms, waste papers, unworked diamonds, leather in raw/semi-finished form, seeds and nuts, parts of machinery, etc.

The detailed Table 1 reported in 'Annex D' shows the complete list of products identified under Quadrant B in both the time-periods 2010-12 and 2015-17 ranging from the lowest share in Indian imports (from 0%) to relatively higher shares (i.e. share up to the average level). These are the products for which the respective governments must design and implement appropriate trade policies to address prevailing NTBs. The change in policies should work in such a way that the identified competitive products for exports are also able to garner significant or improved share in India's imports in the coming years.

Quadrant D could also be a focal segment signifying potential future possibilities in terms of building competitiveness and supply capacity in different goods of the selected countries. The main African countries, based on the number of goods identified under this quadrant, remained the same during both the selected time periods, viz. Nigeria, Kenya and Tanzania (followed by Ghana and Senegal in 2010-12; and Ghana and Zambia during 2015-17). However, similar to Quadrant B, the number of products identified under Quadrant D have also significantly

declined over time for almost 50% of the countries, with the maximum fall reported in the case of countries such as Nigeria, Kenya and Senegal.

### **9.1.2 Analysis of Asian goods exports**

According to the quadrant analysis, majority of goods for the selected Asian countries during 2010-12 belonged to Quadrant B, which represents lower export shares despite high competitiveness (see Table 9.2), followed by Quadrants D and A. Quadrants B and D continue to be the dominant ones even in 2015-17, but with few changes in the pattern, viz. number of goods declined in many cases in the former quadrant (except for Bhutan and Cambodia), with a rise in those identified under quadrant D (except in the case of Nepal, Yemen and even Timor-Leste). Quadrant C registers the least number of commodities in both time periods. The number of products also declined under Quadrant A over the two periods (except in the case of Bhutan, Cambodia, Laos and Timor-Leste). Thus, some Asian LDCs may have lost comparative advantage while exporting goods to India.

This sub-section further elaborates quadrant-wise results for different countries and products. Illustratively, in terms of already high competitiveness index and above-average shares in India's imports, the goods that are identified under Quadrant A in 2010-12 were majorly exported by Bangladesh (more than 100 goods at HS 6 digit level). This was followed by Nepal and Myanmar (goods exported in the range of 40-50). Although the number of goods competitively exported by Bangladesh declined during 2015-17 to around 87, it still reports higher BRCA index values in a majority of the items in both the time-periods (followed by Nepal and Cambodia during 2015-2017). On the other hand, products identified for Bangladesh have been rising under quadrants C and D, where BRCA have become less than zero. Thus, the Bangladesh government may need to maintain comparative advantage and higher shares in India in already significant export items. Notably, Bangladesh holds almost 100 percent share in the exports of dried/salted fish in brine, dried fish other than cod, jute and other textile bast fibres and their yarn, binder/baler twine of sisal or other textile fibres, and men's/boy's suits (not knitted/crocheted).

Apart from this, certain products from Nepal also held significantly high shares in India's imports during 2015-17, mainly foodstuffs (fresh/chilled garlic; buckwheat; fresh/chilled cabbage; vegetable material and wastes) and textile and clothing articles (multiple folded or cabled yarn of synthetic fibres; and men's/boy's ensembles, excluding knitted/crocheted); etc.

At the overall level, goods exported by Nepal have also declined, and the fall has occurred in all the quadrants keeping the pattern more or less same. Most of its products in 2015-17 lie in quadrant D (200), followed by B (around 150), implying low demand for its products in the Indian market as indicated by below-average shares less. Meanwhile, the number of goods exported by Cambodia have increased in all the quadrants, such as from 9 to 35 under quadrant A and from 61 to 150 in the case of quadrant D.

In the case of quadrant A, the least number of products have been recorded for East Timor/Timor-Leste (0 in 2010-12, while 2 in 2015-17). This country only has some products identified in quadrant B, so the concerned government may need to improve shares of such goods in India's imports (as listed in Table 2 of Annex D).

As compared to the African countries, the Asian LDCs have not experienced a sharp decline in the number of their products identified under Quadrant B, except in the case of Myanmar

(with many of its products identified under Quadrant D during 2015-17). In contrast, as already stated above, Bhutan and Cambodia have recorded a significant rise in the number of goods identified in group B. Note that Annexure D (Table 2) lists Asia's goods identified at the disaggregated HS6-digit level for 2010-12 and 2015-17 periods under Quadrant B [products listed as per shares from 0 up to the average].

To elaborate the case of Quadrant B, where India's BRCA is above zero despite low shares, table 9.2 shows the top countries during 2010-12 as Bangladesh (540) and Myanmar (370). However, during 2015-17, the latter witnessed the greatest decline in number of its products (to 70) under this quadrant, while Nepal rose to the second position (despite a fall in the number of products from 173 to 154 over the two periods). Cambodia also continues to export significant number of items under this quadrant in both the periods. Like some top African countries, the selected Asian countries during 2015-17 are also mostly competitively exporting general machinery and parts (HS 84); electric machinery (HS 85); precision machinery and apparatus (HS 90); articles of paper (HS 48); and articles of wood (HS 44). Besides, some product categories are majorly skewed to certain specific countries, viz., products belonging to edible fruit and nuts; peel of citrus fruit or melons (HS 08); and coffee, tea, mate and spices (HS 09) are identified mainly for Myanmar and Nepal; while, cotton (HS 52); man-made staple fibers (HS 55); and wadding, felt and non-wovens, special yarns, twine, cordage, ropes and cables (HS 56) are identified in case of Bangladesh; and automotive and parts (HS 87) in case of Bangladesh and Cambodia (for detailed product list at HS 6-digit, see Annex D). Interestingly, many intermediate products have been exported by Asian LDCs in this quadrant which include parts and tools of machinery (including handtools), textile yarn and fabrics, semi-finished leather, etc. (the sophistication level of exported products has also risen from 2010-12 to 2015-17). At the same time, a significant number of apparel items have also been exported as final products such as sacks and bags, suits and shirts, etc. as well as processed food items, suit-cases, footwears, home furnishing items, etc.

## 9.2 Quadrant analysis of services sector exports

Tables 9.3 and 9.5 map the services exported by African and Asian countries to India across all the four groups in both the years 2000-02 and 2010-12. Tables 9.4 and 9.6 provide the count of services identified in each quadrant for the selected African and Asian countries,

respectively. It may be noted that the quadrant analysis of goods and services are not comparable, given the huge number of products at the HS 6-digit level and only 11 services sectors as covered in the OECD-WTO BaTIS database.

### **9.2.1 Analysis of Africa's services exports**

The analysis shows very few African countries with their limited supply of services identified in Quadrant A in both time-periods 2000-02 and 2010-12 (see Table 9.4). In the former period, out of total eleven services, only Benin competitively exported maximum of four services which also have above-average shares in India's imports (travel, financial, computer and government services), followed by Tanzania and Uganda (three services each including travel and computers; transportation in case of former and financial services in case of latter). Meanwhile, two services were competitively exported by several countries such as Burkina Faso, Central African Republic, Ethiopia, Congo, Ghana, Kenya, Madagascar, Mozambique, Niger, Rwanda, Sierra Leone and Togo (mainly travel, transportation, financial, government, and even computer, insurance and construction services). In contrast, during 2010-12, the number of services in Quadrant A declined even for top exporting countries, such as, for Tanzania (with focus only on travel), for Benin (where government and computer services moved to Quadrants C and B respectively), for Uganda (lost competitiveness in CI services), as well as for Kenya (only focus on transportation), for Congo (lost share in Indian imports for financial services), etc. Thus, in the second time-period, out of 31 countries, Benin, Burkina Faso, Burundi, Central African Republic, Guinea, Guinea-Bissau, Malawi, Mozambique, Nigeria, Rwanda, Sierra Leone, Uganda and Zambia were the major exporters to India supplying two services each (common ones include TN, TL, FS, OB, GS, and also CN).

Table 9.3 shows that for the selected African countries under study, a few services lie in Quadrant A, excluding personal and recreational services and royalties in any of the period. Travel and transportation have been the main services where many African countries are already competitively exporting to India. At the same time, other services mainly communication, computer and information, government, financial and construction have registered greater decline in the number of competitive exporting countries.

Services that lie in Quadrant C already have a good demand in India's imports despite the exporting countries having a comparative disadvantage in those services. Main countries during 2000-02 included Burkina Faso and Madagascar (with supply of three services each). Moreover, Burundi followed by Kenya and Togo have also been identified as major exporters of three-four services in 2010-12 including travel, communication, recreational, government, insurance, etc.

Major findings on the services identified under Quadrant B are as follows:

- Countries with the maximum number of services identified under this quadrant during 2000-02 were Djibouti and Sudan (4 services each with common ones as communications and OB services, along with transportation and insurance in case of former and financial and computer in case of latter), followed by Burkina Faso, Madagascar and Mauritania (three services each, with common ones as financial, insurance, transportation, etc.). Other important ones include Burundi, Ethiopia, Ghana, Guinea, Guinea-Bissau, Kenya, Lesotho, Mali, and Senegal who were competitive in case of two services each, i.e., transportation, computer and information, financial service, etc. (table 9.4).

- On the whole for entire selected African region, top services in 2000-02 for this quadrant included transportation (supplied by 13 countries at that time, which have increased to 16 in 2010-12), computer and information services (by 10 countries in 2000-02, which although reduced to 6 later) and financial services (by 7-8 countries in both the periods), followed by other business service (number of supplying countries have increased from 5 to 17). In travel services case, most of the services lie in either A or D.
- During 2010-2012, the major countries in Quadrant B were Mali and Mauritania (supplying 4-5 identified services to India), with export competitiveness in services of transportation, other business, financial services and travel, etc. These are followed by other countries, such as, Angola, Benin, Chad, Guinea, supplying exactly the three services to Africa. These have higher comparative advantages while supplying services to India and their share could be increased in concerned services sector (see table 9.4). In short, top services in Quadrant B in 2010-12 thus include transportation, OB, financial, and computer services. These identified services have potentials and thus even few directed schemes by government could help to increase their shares in Indian imports.

### 9.2.2 Analysis of Asian services exports

As compared to African countries, a fewer number of services were identified in the case of Asian LDCs in the different quadrants. But here too, for a majority of the Asian countries, the concerned services sector lies in Quadrant D in both the time periods 2000-02 and 2010-12, followed by quadrants B and C; while Quadrant A has the least number of countries (see Tables 9.5 and 9.6). Thus, these countries still lack competitiveness in exporting a number of services to India as compared to their goods exports.

As per services and their exporting countries identified under Quadrant A, Nepal and Cambodia were found to be supplying the maximum number of services (two services each including travel; while communications for Nepal and transportation in case of latter) to India during 2000-02, followed by Myanmar, Yemen, Bangladesh and Bhutan (exporting one service each, mostly travel, but construction in case of Bangladesh). In contrast, during 2010-2012, Nepal, Myanmar and Bhutan have competitively exported only travel services. On the other hand, Yemen and Laos did not export any services competitively under this quadrant in 2010-12. These findings from the quadrant analysis are consistent with those from services sector analysis done in Chapter 6.

Quadrant B includes services with BRCA index values greater than 0 but with low shares in Indian imports. The top services in which selected countries hold greater comparative

advantages in 2000-02 included computer and information, transportation, followed by construction and communications. But during 2010-12 (Table 9.5), the number of countries declined for all of these services due to movement into other quadrants (particularly Quadrant D), such as for communication, computers, construction and transportation services. In both the periods, other important services included travel, financial and OBS (supplied only by one country each, except for OBS where the number of countries has increased to two during 2010-12). On the other hand, government, insurance, recreational and royalties did not have any Asian country identified under this quadrant for any time period (these too have countries mostly listed under group D).

Further country-services wise quadrant B analysis (Table 9.6) shows that during 2000-02, Bangladesh and Yemen were competitively exporting the maximum number (4-5) of services (mainly transportation, communication and computer/information services, as well as travel and financial services in case of former and construction in case of latter), followed by Laos (transportation and OBS). In fact, during 2010-12, Yemen exported the maximum number of services, i.e., financial, computer, and OBS, followed by Bangladesh and Laos (with common service of transportation, followed by travel in case of former and OBS in case of latter). In other words, there has not been any change in the position of Laos in its services exports in the quadrant analysis. Other significant exporters in 2010-12 included Nepal which competitively supplied computer services to India. Meanwhile, no services have been identified for Bhutan, Cambodia, and Myanmar under Quadrant B during 2010-12.

There have also been some major changes in services under quadrant B. For instance, Bangladesh is now competitive only in travel and transportation, but has lost BRCA in rest of them (FS, CS and CI); Yemen lost competitiveness in case of TN, CS, CN (except CI); and Cambodia lost in case of CI.

For few services identified under Quadrant C, which already have above-average shares in Indian imports though with low BRCA, Bangladesh, Laos, Nepal, Yemen and Myanmar have been the top exporters in the both the periods (with a rise in the number of services for most of them).

## **CHAPTER 10**

### **Conclusion and policy recommendations**

This study has aimed at examining trade and the investment opportunities between India and selected 41 African and Asian economies mainly LDCs. The focus has been on these countries' export opportunities in the Indian market and on India's investment opportunities in them. A discussion of general regulatory and sector-wise barriers to trade and investment in these countries has also been provided based on secondary data and a review of the existing literature on this subject.

#### **10.1 Summary of key findings**

Amongst the African countries studied in this report, Nigeria and Angola have been the top sources of merchandise imports for India in 2010-12 (followed by Tanzania, Ghana, Senegal, and Guinea) and in 2015-17 (Ghana, Zambia, Mozambique, and Guinea). Amongst the sample of Asian LDCs, India imported goods from Yemen, Myanmar, Bangladesh and Nepal in 2010-12, but over time Yemen lost its position while that of Laos improved significantly. In both time periods, India's main imports from Africa include petroleum oils, precious stones and metals like gold and diamonds, mineral ores (manganese, copper, iron), coal, natural gas, and agricultural products covering dried leguminous vegetables, oil seeds, cashew nuts, beans, sesamum seeds, cloves). India's imports from Asia too have been concentrated in few traditional product lines such as jute, fish, gold, petroleum oil, copper ores, ferro-silico, beans, nuts, non-alcoholic beverages, etc. Thus the export baskets of the 41 countries studied in this report are still not diversified enough to meet the rising demand for consumer and capital goods in India. At the same time, this shows the existence of immense untapped potential for enhancing these countries' trade and investment relationship with India. This is corroborated by identifying those commodities in 2015-17 which India imports significantly from the rest of the world but not from the concerned African and Asian countries. Such products include petroleum oils, gold, diamonds, coal, telephone for cellular network, parts of telephones sets, palm oil etc. Ironically, some of these products have been identified as India's top global imports. This implies that only few of the sample countries are significant exporters to India, while there exist supply-side constraints in others, which can be addressed by appropriate policy action.

Secondly, the value of these countries' services exports to India is much lower compared to their merchandise exports. But over the years 2010-12 and 2015-17, India's services imports have increased from all the 38 countries for which services trade data were available, even as India's merchandise imports from five Asian LDCs (excluding Cambodia, Laos and Bangladesh), and from Angola, Benin, Central African Republic, Guinea-Bissau, Kenya, Niger, and Nigeria, have actually declined. This shows these countries' growing services trade linkages with India, which must be enhanced with right policies. But as top merchandise exporters to India (Nigeria, Angola) are also experiencing a decline in their trade, sustaining manufacturing competitiveness of these countries becomes a policy priority. At the same time, some of the lowest exporting countries (Burundi, Central African Republic, Rwanda in Africa for goods and Lesotho for services; and Cambodia, Timor-Leste and Laos in Asia) could be explicitly targeted for removing barriers to trade.

Over the years, Nigeria and Nepal have remained the top African and Asian services exporters to India, respectively. Other major services exporters include Liberia (2000-02, replaced by Angola in 2010-12), Senegal, Kenya, and Tanzania in Africa; and Yemen, Myanmar, Bangladesh and Bhutan in Asia. The major services exports of these countries to India in both time-periods include travel and transportation and other business services (OBS). This also points to the need for enhancing these countries' export capacities in other sectors especially computer and information services, where there is potential for value-chain integration with India.

Limited capacities in LDCs of Africa, and even Asia, for supplying goods and services to India has been regarded as one of the main obstacles in full realization of their bilateral trade. However, India can potentially invest in those sectors in the selected African and Asian countries which have supply constraints (i.e., India's global imports exceed the concerned country's global exports as well as the associated region's global exports). Results show that none of the Asian LDCs have a supply constraint in any of the goods and services, due to the Asian region's huge global exports. In Africa, in contrast, commodities with lack of supply capacity have almost been the same across all the countries. India thus has an investment potential in several commodities namely animal or vegetable fats, organic chemicals, pharmaceuticals, fertilizers, tanning or dyeing extracts, albuminoidal substances, photographic or cinematographic goods, plastics and rubber articles, wood, paper, printed books, textiles, umbrellas, articles of stone, ceramic and glass products, base metals and their articles, general, electrical and precision machinery, transport machinery (excluding automotive), toys, etc. India can also potentially invest in Africa's services sectors including financial services, computer and information services, and OBS.

For the cumulative time period 2010-2018, India's greenfield investment stood at \$19.2 billion and \$10.3 billion in the selected African and Asian countries, respectively. In Africa, the top recipients have been Mozambique, Nigeria and Ghana with a cumulative 58.8% share, while in Asia, Bangladesh alone received around 72% of total greenfield investment. Sector-wise, India has majorly invested in the communications sector in Africa (\$2.7 billion in selected countries). Other sectors such as real estate and software & IT services in case of Democratic Republic of Congo; chemical and automotive OEM in Ghana; chemical and non-automotive transport OEM in Nigeria; etc., have received significant Indian greenfield investment. This is in contrast to the Asian countries where India has invested heavily in sectors like textiles (\$2.3 billion) and automotive OEM (\$1.8 billion), followed by coal, oil and gas, business services, renewable energy, financial services and even wood products. Further, some significant trade-investment linkages could be traced between India and six African countries (Zambia, Ethiopia, Mozambique, Sierra Leone, Kenya, and Congo) and three Asian countries (Bangladesh, Laos and Nepal). Such linkages are prominent in the case of communications services and OBS. Prominent manufacturing sectors in terms of linkages are coal, metals, food, automotive OEM and chemicals (in the case of Africa), and textiles and wood products (in the case of Asia).

At the same time, there are a number of non-tariff barriers (NTBs) in the selected African and Asian countries including restrictions/ban of imports in certain sectors such as agricultural goods including poultry, processed meat and vegetables, soaps, chemicals, steel and iron articles, used clothing, footwear, rubber articles, cosmetics, mining/oil and gas, pharmaceuticals, genetically engineered food grains, toys, antiques, narcotic drugs, motor vehicles, wines and spirits (bans/restrictions as reported by Nigeria, Angola, Ethiopia, Kenya, Uganda, Myanmar, Bangladesh, Laos, etc.) and even in lotteries, beauty salons, printing of recharge cards, automobile rentals services, petty trading (like in Ghana). There are restrictions

on foreign entry in banking, financial and insurance services and even in telecommunication. These are followed by non-transparent and complex custom valuation and clearance procedures, along with huge infrastructural bottlenecks resulting in high logistic costs. Many of these countries are LDCs which have huge trade finance gap, less conducive business environment with many unorganized enterprises, and less developed manufacturing sector with weak product diversification. Limited capital availability and supply side capacities further limit their linkages in global value chains (GVCs). In the case of Africa particularly, there is a lack of awareness about India's DFTP scheme which leads to under-utilization of the scheme, despite the high product coverage under the duty-free list. There is also an asymmetry of information between India and Africa, viz. lack of online data to provide information to Indian firms, as well as hurdles in tracing reliable local business partners. Another key barrier is the absence of bilateral investment agreements between India and the selected 33 African countries. On the other hand, Asian LDCs are geographically closer to India especially Bangladesh, Nepal and Myanmar, but continue to face connectivity issues, disturbed border trade or weak border-related infrastructure. India's trade and investment linkages are still more with developing/developed ASEAN (Indonesia, Thailand and Singapore) rather than with LDCs (Laos, Cambodia). Further, Asian LDCs prefer sourcing from other Asian countries (in sectors like textiles) than India thereby resulting in lower imports and investment from India. Restrictions under internal laws and policies of selected Asian LDCs to attract FDI further act as an obstacle, for instance, FDI reforms have been liberalized in Bangladesh but it still has limited scope and coverage under its foreign investment promotion law. On the other hand, India continues to raise its import tariffs on a number of goods including automobiles, coffee, alcoholic beverages, agricultural goods, gemstones, electronics, etc., or bans imports in case of items of animal origin or restricts imports of ICT goods, chemicals, etc. India also has huge certification and in-country inspection and testing as well as registration requirements with national authorities which involve fees and long procedures. Foreign entry is also barred in India's legal services, with restrictions in the case of financial and insurance services and in telecom/media sectors.

Finally, the study has also undertaken a quadrant analysis to identify the products and services where the selected African and Asian countries still have low shares in Indian imports despite a revealed comparative advantage in exporting (identified under Quadrant B). Active trade promotion policies may be required in this case. Across both regions, most of these products belong to the categories of general, electric and precision machinery followed by wood articles, paper articles, as well as fruits and vegetable products, and also some textiles items in the case of Asian LDCs. For services, transportation, OBS, financial, and computer and information services are identified under this quadrant for both the regions, where export shares need to be improved.

## **10.2 Policy recommendations**

On the whole, there exist a large number of trade and investment opportunities between India and the selected African and Asian countries studied in this report. However, many of these opportunities are still untapped due to barriers including supply-side constraints, limited finance, weak infrastructure, and lack of supportive policies to expand these countries' exports to India and India's investment in them. If government policies and the business environment become more conducive mainly in African LDCs, their manufacturing industries can upgrade better and link into India's value chains. At the same time, these countries would also need to improve the cost-competitiveness of their products so that India can import more inputs from them as compared to other existing exporters. Meanwhile, LDCs are also gaining strength in

exporting several services (supply constraints exist only in financial services, computer services and OBS). As India already has a competitive services sector, these countries should also integrate into India's services value-chains especially in computer and information services. Nevertheless, technological upgrading and skill development is needed in all the countries, even in India, so as to develop a strong competitive trade and investment environment. A big push is required on both sides for providing adequate infrastructure and appropriate domestic reforms to produce and supply quality goods and services. There is also a need to fully explore the vertical trade complementarities that exist in the textiles and clothing sector, especially between India and Africa.

Moreover, in the light of China's growing investments in the selected countries particularly in Africa, as well as its ambitious Belt and Road Initiative, India urgently needs to look at the strategic aspect of its relationship with African and Asian LDCs in terms of not only improved economic cooperation, but also closer diplomatic relations. While China is a manufacturing hub, India has an edge in the services sectors; on soft power; in people relations-related investments like health and education; in investment in startups and new technologies suited to poor countries, all of which can be tapped to explore forward-looking possibilities in trade and investment between India and these countries.

Against this background, some important policy suggestions which can help develop and enhance trade and investment linkages between India and the selected African and Asian countries are as follows:

1. India can invite more companies from the selected countries to showcase their products and services in international exhibitions held in India. The concerned governments should also incentivize such participation.
2. Industry associations of the exporting countries should organize regular meetings at least once a year with their Indian counterparts to gain more awareness about existing schemes such as the DFTP offered by India and about changes that may be required to meet Indian product/sector-specific SPS and TBT requirements. Such sharing of knowledge could be vital, in helping Indian companies better identify sectoral investment opportunities in the selected countries as well as understanding the effects of past and current investment on the host country. Thus, there is a greater need to enhance the role of industry chambers, associations as well as sectoral bodies in promoting trade and investment linkages between India and the selected African and Asian economies.
3. African and Asian countries need to diversify their export basket by especially moving beyond trading of agricultural and mineral goods, textiles, etc., to more sophisticated and even capital-intensive items. For this, they first must focus on the items which are currently being imported by India from rest of the world but not competitively from them. Second, they could even integrate into the bottom end of manufacturing chains of Indian brands. Many small players in these countries could be encouraged to connect their manufacturing and services activities with designing and high-tech production activities of major players in India.
4. Domestic enterprises in these countries must be given easy loans and finance in order to form such value-chain linkages with India. They could also be allowed duty-free imports of inputs not available in their domestic markets to improve their cost competitiveness.
5. Indian investment should be increased in sectors which are competitive but may lack supply capacities in the selected exporting countries (some of these goods and services have been identified in this study lying in quadrant B during the quadrant analysis).

6. Such investment should be complemented by pro-active trade promotion policies by the concerned governments of the selected countries especially for those products and services where they have a revealed competitiveness in exporting to India, but which still have lower than average shares in India's total imports.
7. These countries must also re-visit their trade policies given the growing servicification of manufacturing GVCs and the spread of digital trade. In this respect, Banga and Velde (2018) also state that “African countries both face a digital divide and reap fewer benefits from digital technologies once installed. African countries should build up industrial capabilities in less-automated sectors (such as food and beverages, garments, metals, and paper) that can help them to move into higher-value-added activities. They should also urgently prepare for a more digital future by stimulating access to broadband and developing technical skills and technology hubs.”
8. All countries, including India, could reconsider some of the restrictions and prohibitions that they have placed on imports of their goods and services, particularly in those sectors where demand and supply tends to match between India and the selected countries (for instance in agricultural goods, electronics, textiles, IT and financial and business services, etc. based on their competitiveness).
9. In the longer term, African governments could also make efforts to upgrade the quality and skillset of their labour force if they desire to compete with other growing economies. LDC firms could also be incentivized to form JVs with firms in other countries including India so as to learn from best practices in designing, manufacturing, branding, etc. Such practices could also be shared by India with better “performing” African countries such as Nigeria, Ghana and Kenya.
10. Along with utilising its existing capabilities in certain manufacturing sectors, India can tap its potential in soft power, in people-relations related investments such as health, and education, or even for investments in start-ups and new technologies that are likely to be more suitable for vulnerable economies of selected LDCs.

## ANNEX A (Goods)

[Note: The tables report the top ten commodities imported by India from select African (33) and Asian (8) countries averaged over three-year periods from 2010 to 2012 and 2015 to 2017. It also reports the share of each of the top ten commodities in the total merchandise imports of India from these countries along with India's imports from rest of the world (ROW). The top ten commodities imported are highlighted in different colours according to whether they belong to the exclusion list (where no tariff concessions are given), Margin of Preference (MOP) list (some tariff concession is given) or if they are under the duty-free list under the Duty-Free Tariff Preference (DFTP) Scheme. Thus, the commodities are highlighted in orange if they belong to the duty-free list, purple if they are under the MOP list and bold if they are in the exclusion list. If the products of a country are not highlighted in any colour or bold, it means that country has not been a part of the DFTP scheme offered by India in that particular year.]

<b>Country</b>	<b>2010-2012</b>	<b>2015-2017</b>
Angola	Machine-tools; parts and accessories, dividing heads and other special attachments for machine-tools (846630); Iron ores & concentrates (excl. Roasted iron pyrites) (260112); Glazed ceramic flags & paving/hearth/wall tiles (690890); Iron or steel tubes, pipes and hollow profiles, seamless, n.e.s. (730490); Plates, sheets, film, foil & strip, of polymers of propylene, non-cellular and not reinforced, laminated, supported or similarly combined with other materials (392020); Plates, sheets, film, foil & strip, non-cellular and not reinforced, laminated, supported or similarly combined with other materials (392049); Compound optical microscopes (excl. stereoscopic and microscopes for photomicrography, cinephotomicrography or microprojection) (901180); Aluminium structures (like plates, rods, profiles, tubes and the like) and their parts, n.e.s. (761090); Unglazed ceramic flags & paving/hearth/wall tiles (690790); Parts of the air-conditioning machines, with motor driven fan and elements for temperature control (841590); Nails, tacks, drawing pins, corrugated nails, staples (of iron and steel) and the like, with heads of other material or not, but excluding articles with heads of copper (731700); Wood, in the rough, n.e.s., whether or not stripped of bark or sapwood, or roughly squared, untreated, (440399); Iron or steel (excluding cast iron or stainless steel); other seamless, casing and tubing, of a kind used in drilling for oil or gas (730429); Pumps and compressors; parts, of air or vacuum pumps, air or other gas compressors and fans, ventilating or recycling hoods incorporating a fan (841490); Marble and travertine, merely cut, by sawing or otherwise, into blocks or slabs of a rectangular (including square) shape, having a specific gravity of 2.5 or more (251512); Aluminium alloys, bars, rods and profiles, other than hollow (760429);	Plates, sheets, film, foil & strip, of plastics n.e.s., non-cellular and not reinforced, laminated, supported or similarly combined with other materials (392099); Plates, sheets, film, foil & strip, other than cellular (392190); Ethylene polymers; in primary forms, polyethylene having a specific gravity of less than 0.94 (390110); Polyethylene having a sp.gr. Of 0.94 or more (390120); Titanium & articles thereof , n.e.s (810890); Spring washers & other lock washers of iron and steel, non-threaded (731821); Waste & scrap of stainless steel (720421); Recovered (waste & scrap) paper/paperboard, n.e.s., and of unsorted waste and scrap (470790); Polymers of ethylene, in primary forms, n.e.s. (390190); Aluminium oxide (excl. artificial corundum) (281820); Polypropylene, in primary forms (390210); Aluminium, not alloyed, unwrought (760110); Unsaturated acyclic hydrocarbons, n.e.s (290129); Ceramic wares; for laboratory, chemical or other technical uses, articles having a hardness equivalent to 9 or more on the Mohs scale (690912); Lead waste & scrap (780200); Copper wire, of refined copper, of which the maximum cross-sectional dimension exceeds 6mm (740811); Aluminium waste & scrap (760200); Tubes, pipes & hoses, of vulcanised rubber (other than hard rubber), reinforced or otherwise combined with materials other than metal or textiles, with fittings (400942); Waste & scrap of cast iron (720410); Ferrous waste & scrap, n.e.s. (720449); Vinyl chloride, other halogenated olefin polymers; vinylidene chloride polymers, in primary forms (390450);

	<p>Engines; parts, suitable for use solely or principally with spark-ignition internal combustion piston engines (for other than aircraft) (840991);</p> <p>Human hair, unworked, whether or not washed or scoured, and waste of human hair (50100);</p> <p>Packing/wrapping machinery (842240);</p> <p>Interchangeable tools for hand tool, whether or not power-operated, for screw-driving or uses n.e.c (820790);</p> <p>Other drinking glasses, other than of lead crystal or glass-ceramics (701337);</p> <p>Waste &amp; scrap of stainless steel (720421);</p> <p>Flat-rolled products of stainless steel, width less than 600mm, nes (722090);</p> <p>Bearing housings, incorporating ball or roller bearings (848320);</p> <p>Railway/tramway track construction material of iron and steel, n.e.s. (730290);</p> <p>Bicycles and other cycles; including delivery tricycles, not motorised (871200);</p> <p>Other tubes, pipes and hollow profiles (for example, open seam or welded, riveted or similarly closed), of iron or steel (730690);</p> <p>Bentonite (250810);</p> <p>Other tubes and pipes (for example, welded, riveted or similarly closed), having circular cross-sections, the external diameter of which exceeds 406.4 mm, of iron or steel (730590);</p> <p>Hand-/foot-operated air pumps (841420);</p> <p>Worked monumental/building stone of granite; articles thereof, simply cut or sawn, with a flat or even surface (680223);</p> <p>Unwrought lead other than refined, not containing by weight antimony as the principal other element (780199);</p> <p>Rails of iron/steel (730210);</p> <p>Copper waste &amp; scrap (740400)</p>	<p>Worked monumental/building stone of granite; articles thereof, simply cut or sawn, with a flat or even surface (680223);</p> <p>Waste and scrap of primary cells, primary batteries and electric accumulators; spent primary cells, spent primary batteries and spent electric accumulators (854810);</p> <p>Diamonds; non-industrial, unworked or simply sawn, cleaved or bruted, but not mounted or set (710231)</p>
Benin	<p>Interchangeable tools for hand tool, whether or not power-operated, for screw-driving or uses n.e.c (820790);</p> <p>Plates, sheets, film, foil &amp; strip, other than cellular (392190);</p> <p>Ball bearings (848210);</p> <p>Articles of vulcanised rubber other than hard rubber, n.e.s. (401699);</p> <p>Carboys, bottles, flasks, jars, pot and other containers of glass, (not ampoules), used for the conveyance or packing of goods (701090);</p> <p>Photosensitive semiconductor device (854140);</p> <p>Pulleys and flywheels, including pulley blocks (848350);</p> <p>Self-adhesive plates, sheets, film, foil, tape, strip, other flat shapes thereof, other than in rolls of a width not exceeding 20cm (391990);</p> <p>Fixed electrical resistors for a power handling capacity &lt;= 20 W (excl. Heating resistors) (853321);</p> <p>Other parts &amp; accessories for the motor vehicles (870899);</p>	<p>Lac; natural gums, gum resins, resins and balsams, n.e.s. (130190);</p> <p>Compound optical microscopes (excl. Stereoscopic and microscopes for photomicrography, cinephotomicrography or microprojection) (901180);</p> <p>Waste &amp; scrap of stainless steel (720421);</p> <p>Recovered (waste &amp; scrap) paper/paperboard, n.e.s., and of unsorted waste and scrap (470790);</p> <p>Preparations of a kind used in animal feeding, put up for retail sale (except dog or cat food) (230990);</p> <p>Dried leguminous vegetables, n.e.c., shelled, whether or not skinned or split (71390);</p> <p>Wood sawn/chipped length wise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6mm (440710);</p> <p>Waste &amp; scrap of cast iron (720410);</p> <p>Ferrous waste &amp; scrap, n.e.s. (720449);</p> <p>Aluminium waste &amp; scrap (760200);</p>

<p>Taps, cocks, valves and similar appliances; for pipes, boiler shells, tanks, vats or the like, including thermostatically controlled valves (848180);</p> <p>Mechanical appliances, for projecting, dispersing or spraying liquids or powders, for other than agricultural or horticultural use, whether or not hand-operated (842489);</p> <p>Printing ink (excl. Black) (321519);</p> <p>Tapered roller bearings, incl. Cone and tapered roller assemblies (848220);</p> <p>Organic comps. N.e.s. (294200);</p> <p>Iron or steel threaded articles except screw, nut,bolts (731819);</p> <p>Electrical apparatus; n.e.c., for switching or protecting electrical circuits, for a voltage not exceeding 1000 volts (853690);</p> <p>Relays for a voltage &gt; 60 V but &lt;= 1.000 V (853649);</p> <p>Articles of plastics, n.e.s. (392690);</p> <p>Parts and accessories of data processing equipment (847330);</p> <p>Machines for used in the milling industry or for the working of cereals or dried leguminous vegetables, other than farm-type machinery (843780);</p> <p>Transmission belts/belting, n.e.s., of vulcanized rubber (401039);</p> <p>Machine-tools for wood, cork or hard plastic, etc. N.e.s. (846599);</p> <p>Other Parts suitable for use solely or principally with the apparatus of headings 8525 to 8528 (reception and transmission apparatus, monitors, etc.) (852990);</p> <p>Air conditioning machines comprising a motor-driven fan and elements for changing the temperature and humidity, window or wall types, self-contained or split-system (841510);</p> <p>Static converters (850440);</p> <p>Electric motors of an output not exceeding 37.5W (850110);</p> <p>Woven fabrics of synthetic staple fibres, containing 85% or more by weight of polyester staple fibres, other than unbleached or bleached (551219);</p> <p>Parts of cranes, work trucks, shovels, constr machine (843149);</p> <p>Perfuming or deodorizing preparations n.e.s., Depilatories &amp; other perfumery (330790);</p> <p>Sewing machines of the household type (845210);</p> <p>Ceramic sinks, wash basins, wash basin pedestals, baths, bidets, water closet pans, flushing cisterns, urinals and similar sanitary fixtures; of other than porcelain or china (691090);</p> <p>Dried leguminous vegetables, n.e.c., shelled, whether or not skinned or split (71390);</p> <p>Electric lamps &amp; lighting fittings, nec (940540);</p> <p>Palm oil, other than crude, &amp; its fractions,whether or not refined, but not chemically modified (151190);</p>	<p>Waste &amp; scrap of tinned iron/steel (720430);</p> <p>Gum Arabic (130120);</p> <p>Wood, n.e.s., sawn/chipped lengthwise/sliced lengthwise/sliced/peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6mm (440729);</p> <p>Topical wood, n.e.s., in the rough, whether or not stripped of bark or sapwood, or roughly squared, untreated (440349)</p>
---	--

	<p>Zinc alloys, unwrought (790120);</p> <p>Parts of electric filament or discharge lamps, sealed beam lamp units, ultra-violet or infra-red lamps and arc-lamps, n.e.s. (853990);</p> <p>Electrical apparatus like switches n.e.c. In heading no. 8536, for a voltage not exceeding 1000 volts (853650);</p> <p>Sheets n.e.s. For veneer or plywood, other wood sawn lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, not thicker than 6mm (440890);</p> <p>Parts suitable for use solely or principally with the apparatus of heading 8535, 8536 or 8537, n.e.s. (excl. boards, panels, consoles, desks, cabinets and other bases for the goods of heading 8537, not equipped with their apparatus) (853890);</p> <p>Projectors, not of a kind solely principally used in an automatic data processing system of heading 84.71 (852869);</p> <p>Filtering/purifying machinery &amp; apparatus, other than intake air filters for internal combustion engines (842139);</p> <p>Men's/boys' shirts (excl. knitted/crocheted), of textile materials n.e.s. (620590);</p> <p>Plywood; consisting only of sheets of wood (not bamboo), each ply 6mm or thinner, with at least one outer ply of tropical wood (441231);</p> <p>Hotographic goods; chemical preparations other than sensitised emulsions, put up in measured portions or put up for retail sale in a form ready for use (370790);</p> <p>Tubes, pipes &amp; hose fittings (e.g. Joints, elbows, flanges) (391740);</p> <p>Other printers, copying machines, single-function printing, not capable of connecting to an automatic data processing machine or to a network (844339);</p> <p>Quicklime (252210);</p> <p>Waste &amp; scrap of stainless steel (720421);</p> <p>Permanent magnets and articles intended to become permanent magnets after magnetization, of materials other than metal (850519);</p> <p>Newspaper, in rolls/sheets (480100);</p> <p>Paper and paperboard; coated with kaolin or other inorganic substances, for printing/writing/graphics, having 10% or less by weight of total fibres got by mechanical/chemi-mechanical process, sides exceeding 435mm and 297mm, unfolded, sheets (481019);</p> <p>Parts of the air-conditioning machines, with motor driven fan and elements for temperature control (841590);</p> <p>Other colour reception apparatus for television, whether or not incorporating radio broadcast receivers sound video recording reproducing apparatus, (852872);</p> <p>Pears &amp; quinces, fresh (80820);</p> <p>Tubes, pipes &amp; hollow profiles of stainless steel (excluding cold-drawn or cold-rolled) (730449);</p>

Burkina Faso	Ferrous waste & scrap, n.e.s. (720449); Mixtures & articles of heat-insulating, sound-insulating or sound-absorbing mineral materials, n.e.s. (680690); Reciprocating positive displacement pumps, n.e.s. In 8413, for liquids (841350); Lubricating preparations (other than for the treatment of textile and similar materials) containing less than 70% (by weight) of petroleum oils or oils obtained from bituminous minerals (340319); Micro-crystalline petroleum wax, slack wax, lignite wax, ozokerite, peatwax other mineral waxes and similar products obtained by synthesis or by other processes, whether or not coloured (271290); Bran, sharps and other residues; of other cereals, whether or not in the form of pellets, derived from the sifting, milling or other workings thereof (230240)	Filtering/purifying machinery & apparatus (842121); Shutters, blinds (incl. Venetian blinds) and similar articles and parts thereof (392530); Oil seeds & oleaginous fruits, n.e.s., whether or not broken (120799)
Burundi	Ferrous waste & scrap, n.e.s. (720449); Phosphoric acid and polyphosphoric acids (280920); Fuel/lubricating/cooling medium pumps for internal combustion piston engines (841330); Winding wire, other than of copper (854419); Parts of machinery for sorting, screening, separating, washing, crushing etc mineral substances, for agglomerating, shaping or moulding solid fuels, ceramic pastes etc, for forming foundry moulds of sand (847490); Chemical products & preparations of the chemical or allied industries, n.e.s. (382490); DC motors and generators of an output exceeding 375kw (850134); Tanned/crust hides & skins of bovine or equine animals, in the wet state (including wet blue), without hair on, excluding full grains, unsplit; grain splits (410419); Tanned/crust skins of sheep/lambs, without wool on, whether or not split, but not further prepared, in the wet state (including wet-blue) (410510); Raw hides & skins of bovine (including buffalo) and equine animals, fresh, salted or preserved, but not tanned, parchment dressed or further prepared, whether or not dehaired or split (410190)	Universal AC/DC motors of an output exceeding 37.5W (850120); Storage units of ADP (847170); Parts of the engines & motors of 8412 (841290)
Central African Republic	Articles of iron/steel, n.e.s. (732690); Taps, cocks, valves and similar appliances; for pipes, boiler shells, tanks, vats or the like, including thermostatically controlled valves (848180); Fuel/lubricating/cooling medium pumps for internal combustion piston engines (841330); Aluminium waste & scrap (760200); Copper waste & scrap (740400); Ferrous waste & scrap, n.e.s. (720449); Wood, in the rough, n.e.s., whether or not stripped of bark or sapwood, or roughly squared, untreated, (440399)	Photosensitive semiconductor device (854140); Monofilament of which any cross-sectional dimension exceeds 1mm, rods, sticks and profile shapes, whether or not surface-worked but not otherwise worked (391690); Aluminium waste & scrap (760200); Vacuum cleaners, with self-contained electric motor, n.e.c. (850819); Diamonds; non-industrial, unworked or simply sawn, cleaved or bruted, but not mounted or set (710231); Plugs and sockets for a voltage <= 1000 V (excl. Lamp-holders) (853669);

		<p>Unwrought lead other than refined, not containing by weight antimony as the principal other element (780199);</p> <p>Winding wire for electrical purposes, of copper, insulated (854411);</p> <p>Paper/paperboard labels of all kind, printed (482110);</p> <p>Handbags, whether/not with shoulder strap and including those without handle, with outer surface of plastic sheeting or of textile materials (420222);</p> <p>Other parts and accessories for printing machinery excl. 844391 (844399);</p> <p>Semi conductor media, Smart cards for the recording of sound of other phenomena, but excl. Products of Ch. 37. (852352);</p> <p>Pumps n.e.s. Bangladesh	<p>Plaited bands, slings &amp; the like, of iron/steel, not electrically insulated (731290);</p> <p>Parts of taps, cocks, valves and similar appliances (848190);</p> <p>Processing units for automatic data processing machines, whether or not containing in the same housing one or two of the following types of unit storage units, input units, output units (847150);</p> <p>Paints &amp; varnishes (incl. Enamels &amp; lacquers), based on polymers n.e.s., dispersed or dissolved in a non-aqueous medium (320890);</p> <p>Non-threaded articles, n.e.s., of iron/steel (731829);</p> <p>Threaded elbows, bends &amp; sleeves of material other than stainless steel (730792);</p> <p>Epoxide resins, in primary forms (390730);</p> <p>Office machines; automatic banknote dispensers, coin-sorting machines, coin-counting or wrapping machines, pencil-sharpening machines, perforating or stapling machines (847290);</p> <p>Plates, sheets, film, foil &amp; strip, other than cellular (392190);</p> <p>Bearings; n.e.c., including combined ball/roller (848280);</p> <p>Organic comps. N.e.s. (294200);</p> <p>Drilling machines for drilling by removing metal, other than numerically controlled (845929);</p> <p>Newspaper, in rolls/sheets (480100);</p> <p>Parts &amp; accessories n.e.s. In Ch.90 (903300);</p> <p>Parts and accessories for instruments, appliances and machines measuring or checking (903190);</p> <p>Fixed electrical resistors for a power handling capacity &lt;= 20 W (excl. Heating resistors) (853321);</p> <p>Parts of cranes, work trucks, shovels, constr machine (843149);</p> <p>Parts of machinery for sorting, screening, separating, washing, crushing etc mineral substances, for agglomerating, shaping or moulding solid fuels, ceramic pastes etc, for forming foundry moulds of sand (847490);</p> <p>Air compressors mounted on a wheeled chassis for towing (841440);</p> <p>Table/floor/wall/window/ceiling/roof fans, with a self-contained electric motor of an output not exceeding 125W (841451);</p> <p>Parts suitable for use solely or principally with electric motors and generators, electric generating sets and rotary converters, n.e.s. (850300);</p> <p>Diagnostic/laboratory reagents on a on a backing and prepared diagnostic or laboratory reagents whether or not on a backing; certified reference material (382200);</p>	<p>Tools for pressing/stamping/punching, for machine or hand tools, whether or not power-operated (820730);</p> <p>Tapered roller bearings, incl. Cone and tapered roller assemblies (848220);</p> <p>Plates, sticks, tips &amp; the like for tools, unmounted, of sintered metal carbides or cermets (820900);</p> <p>Line pipe of a kind used for oil/gas, of stainless steel, seamless (730411);</p> <p>Air conditioning machines comprising a motor-driven fan and elements for changing the temperature and humidity, window or wall types, self-contained or split-system (841510);</p> <p>Non-threaded cotters &amp; cotter-pins, of iron/steel (731824);</p> <p>Parts and accessories for machine tools, for laser operation, metalworking machining centers, lathes and drilling machines, etc., others (846693);</p> <p>Parts of the air-conditioning machines, with motor driven fan and elements for temperature control (841590);</p> <p>Parts &amp; accessories of motorcycles (mopeds), other than saddles (871419);</p> <p>Loudspeakers; not mounted in their enclosures (851829);</p> <p>Oxidation inhibitors, gum inhibitors, viscosity improvers, anti-corrosive preparations, other prepared additives for mineral oils or liquids used as mineral oils (including gasoline), n.e.s. (381190);</p> <p>Leaf-springs &amp; leaves therefor, of iron/steel (732010);</p> <p>Paints &amp; varnishes (incl. Enamels &amp; lacquers), (based on polymers other than acrylic or vinyl), dispersed or dissolved in an aqueous medium (320990);</p> <p>Flexible tubing of base metal, with or without fittings, of iron or steel (830710);</p> <p>Vaccines for human medicine (300220);</p> <p>Parts of telephone sets, incl. Telephones for cellular networks for other wireless networks other apparatus for the transmission reception of voice, images other data, incl. Apparatus for communication in a wired wireless network (851770);</p> <p>Saccharin &amp; its salts (292511);</p> <p>Electric conductors, for a voltage &gt; 1.000 V, insulated, n.e.s. (854460);</p> <p>Iron or steel threaded articles except screw, nut,bolts (731819);</p> <p>Other apparatus for transmission reception of voice, images other data, incl. Apparatus for communication in a wired wireless network (such as a local wide area network) (851769);</p>

<p>Sewing thread of artificial filaments, whether or not put up for retail sale (540120);</p> <p>Textile fabrics; otherwise impregnated, coated or covered, painted canvas being theatrical scenery, studio back-cloths or the like (590700);</p> <p>Electronic integrated circuits; processors and controllers, whether or not combined with memories, converters, logic circuits, amplifiers, clock and timing circuits, or other circuits (854231);</p> <p>Mechanical seals (848420);</p> <p>Other Electro-magnets and their parts (excl. Magnets for medical use); electro-magnetic or permanent magnet chucks, clamps and similar holding devices and their parts, n.e.s. (850590);</p> <p>Other parts and accessories of looms, auxiliary machinery, n.e.s. (844849);</p> <p>Discs, tapes, solid state non volatile storage devices, smart cards and other media for the recording of sound of other phenomena, whether or not recorded, incl. Matrices and masters for the production of discs, but excl. Products of Ch.37., other n.e.s. (852380);</p> <p>Woven fabrics of flax, containing less than 85% flax, other than unbleached or bleached (530929);</p> <p>Air conditioning machines comprising a motor-driven fan and elements for changing the temperature and humidity, window or wall types, self-contained or split-system (841510);</p> <p>Instruments, appliances and machines; for measuring or checking n.e.c. (903180);</p> <p>Parts of electrical ignition or starting equipment, generators, etc. Of heading 8511, n.e.s. (851190);</p> <p>Chickpeas (garbanzos), dried, shelled, whether or not skinned or split (71320);</p> <p>Magnetic or optical readers, machines for transcribing data onto data media in coded form and machines for processing such data, n.e.s. (847190);</p> <p>Millstones, grindstones, grinding wheels and the like; of natural stone (680423);</p> <p>Cast articles of iron (excl. Non-malleable cast iron), excluding grinding balls and similar articles for mills (732599);</p> <p>Parts &amp; accessories of the machines or auxiliary machinery for preparing textile fibres, other than card clothing (844832);</p> <p>Parts of aeroplanes/helicopters, others (880330);</p> <p>Articles of iron/steel, n.e.s., forged/stamped, but not further worked (732619);</p> <p>Parts &amp; accessories of regulating or controlling instruments and apparatus; automatic (903290);</p> <p>Millstones, grindstones, grinding wheels and the like; of other agglomerated abrasives or of ceramics (680422);</p> <p>Taps, cocks, valves and similar appliances; for pipes, boiler shells, tanks, vats or the like, including thermostatically controlled valves (848180);</p>	<p>Beans n.e.s., dried/shelled, including seed (71339);</p> <p>Jacks &amp; hoists, (other than hydraulic), of a kind used for raising vehicles (842549);</p> <p>Taps, cocks, valves and similar appliances; for pipes, boiler shells, tanks, vats or the like, including thermostatically controlled valves (848180);</p> <p>Electrical apparatus for switching or protecting electrical circuits, or for making connections to or in electrical circuits, for a voltage <math>&gt; 1.000</math> V (excl. Fuses, automatic circuit breakers, isolating switches, make-and-break switches, lightning arresters, voltage limiters, surge suppressors and control desks, cabinets, panels etc. Of heading 8537) (853590);</p> <p>Machines for the reception, conversion and transmission regeneration of voice, images other data, incl. Switching and routing apparatus (851762);</p> <p>Gas-operated machinery &amp; apparatus, n.e.s., for soldering, brazing or welding, whether or not capable of cutting (846820);</p> <p>Bars, rods &amp; profiles, of copper alloys (other than copper-zinc base alloys) (740729);</p> <p>Activated carbon (380210);</p> <p>Polymers of vinyl chloride/of other halogenated olefin, n.e.s. (390490);</p> <p>Human blood; animal blood prepared for therapeutic, prophylactic or diagnostic uses; cultures of micro-organisms (excluding yeast) and similar products (300290);</p> <p>Sewing needles, knitting needles, bodkins, crochet hooks and similar articles, for use in the hand, n.e.s. , of iron/steel (731990);</p> <p>Polyesters, n.e.s., saturated, in primary forms (390799);</p> <p>Stranded wire, cables, plaited band and the like, of copper, not electrically insulated (741300);</p> <p>Parts suitable for use solely or principally with the apparatus of heading 8535, 8536 or 8537, n.e.s. (excl. Boards, panels, consoles, desks, cabinets and other bases for the goods of heading 8537, not equipped with their apparatus) (853890);</p> <p>Portable automatic data processing (ADP) machines, weighing not more than 10kg, consisting of at least a central processing unit, a keyboard and a display (847130);</p> <p>Copper tubes &amp; pipes, of refined copper (741110);</p> <p>Dies for drawing/extruding metal, for machine or hand tools, whether or not power-operated (820720);</p> <p>Ethylene polymers; in primary forms, polyethylene having a specific gravity of less than 0.94 (390110);</p>
--	--

<p>Air-conditioning machines, comprising a motor driven fan and elements for changing the temperature and humidity, of a kind used for persons, in motor vehicles (841520);</p> <p>Transmission belts/belting, n.e.s., of vulcanized rubber (401039);</p> <p>Electrical measurement instruments nes., without a recording device (903089);</p> <p>Parts of mechanical appliances (parts of machines projecting, dispersing or spraying liquids or powders, whether or not hand-operated) (842490);</p> <p>Polyethylene having a sp.gr. Of 0.94 or more (390120);</p> <p>Tools for drilling, other than rock, for machine or hand tools, whether or not power-operated (820750);</p> <p>Electrical apparatus like switches n.e.c. In heading no. 8536, for a voltage not exceeding 1000 volts (853650);</p> <p>Multiple loudspeakers, mounted in the same enclosure (851822);</p> <p>Organic surface-active agents, surface-active, whether or not containing soap, including auxiliary washing preparations, not for retail sale (340290);</p> <p>Regulating or controlling instruments and apparatus; automatic, other than hydraulic or pneumatic (903289);</p> <p>Instruments and appliances used in medical or veterinary sciences, nes (901890);</p> <p>Ballasts for discharge lamps/tubes (850410);</p> <p>Buckets, shovels, grabs etc for excavating machinery (843141);</p> <p>Machinery, n.e.s. In heading no. 8441, for making up paper pulp, paper or paperboard (844180);</p> <p>Parts suitable for use solely or principally with the apparatus of heading 8535, 8536 or 8537, n.e.s. (excl. Boards, panels, consoles, desks, cabinets and other bases for the goods of heading 8537, not equipped with their apparatus) (853890);</p> <p>Parts of machines and apparatus for soldering or welding or for hot spraying of metals, metal carbides or cermets, n.e.s. (851590);</p> <p>Ball bearings (848210);</p> <p>Colouring matter &amp; other preparations, n.e.s. (320649);</p> <p>Electrical lighting or visual signalling equipment for motor vehicles (excl. Lamps of heading 8539) (851220);</p> <p>Plugs and sockets for a voltage &lt;= 1000 V (excl. Lamp-holders) (853669);</p> <p>Gummed/adhesive paper,paperboard (excluding self-adhesive), n.e.s.
