Indian Economy: Selected Methodological Advances

Mathew Joseph, Karan Singh, Ranjan Kumar Dash, Jyotirmoy Bhattacharya and Ritika Tewari

February, 2011

This paper develops tools to examine selected, major issues in the Indian economy. The study computes the potential growth rate of the

economy and the agricultural sector, extends the analysis of the fiscal stimulus and its effects, and estimates the short and long run elasticities of India's trade. This brings out the need for structural reforms to raise the potential growth rate of the economy and that of agriculture to achieve a non-inflationary, high growth trajectory for the country. The fiscal stimulus effects indicate the importance of fiscal consolidation efforts to sustain high growth. The trade elasticities buttress the case for maintaining an appropriate real effective exchange rate.
