Indian Students in South Korea
12th India-Korea Dialogue, Session 4, 25 October 2013, 9-10:30 am

Ali Mehdi, Consultant, ICRIER
International education landscape

• Internationalization of higher education:
  • International students at tertiary level increased from 2 - 3.6 / 2.1 - 4.1 m (2000-10)
  • USA remains the most preferred destination (19%), UK (11%), Australia (8%)
  • China tops the list of source countries (16%), India (6%), Republic of Korea (4%)

• Emergence of higher education hubs in Australia, Singapore, Japan, Hong Kong, Korea, China and elsewhere in Asia-Pacific to stem brain-drain and attract students from Asia and elsewhere.
  • 45,757 Chinese students in Korea and 25,660 Korean students in Japan, for instance

• Indian students are still an important exception:
  • 86% still go to top 5 traditional destinations. Only 1,152 in Malaysia (0.6%), 576 in Japan, 486 in Korea, 357 in Thailand, 46 in Hong Kong, for instance.
Internationalization of higher education in Korea

- Relaxation of visa regulations
- Numerous scholarships for foreign students
- Local campuses of reputed foreign universities
- *World Class University* project for renowned academics from outside
- Massive funding for research-oriented programs and institutes
- Restructuring of higher education sector to improve quality – ban on sub-standard institutions from admitting foreign students
- Special funding for Korean universities offering courses in English
Survey

- No known survey with Indian students in Korea
- Questionnaire adapted from *Survey of International Students* (Ministry of Education, New Zealand, 2004) and *International Student Survey* (City of Melbourne, Australia, 2010)
- Online survey over 2 weeks in July 2013 with the help of ISA Korea & SNU
- Social media was used to reach out to students
- 48 responses
- No interest expressed by Korean HEIs / Indian Embassy in survey results, despite offer of sharing them. Barring SNU, no support in the survey also.
Brief profile of respondents

• **Geographical:**
  - From 16 Indian states
  - Studying in 16 Korean cities (75% since 3 years or less)

• **Demographic:**
  - 67% in the age-group 26-30 years (15% above 30 years)
  - 88% male (despite 95% finding it safe / highly safe)
  - 21% married (to Indians) – 10 in relationships (1 with a Korean)

• **Academic:**
  - 90% never studied abroad before Korea
  - 67% pursuing PhD
  - 75% studying engineering and natural sciences (44% / 31%)
  - 67% have a Korean scholarship, 21% from Indian government / employer
Choosing Korea

• 71% say Korea not first choice – 85% prefer English-speaking countries
• Scholarships and quality of education emerge as very important factors
• ‘Desire to gain international experience’ was also rated highly (also among other surveys with Indian students in Europe)
• Information dissemination does not play major role – British, French and Germans organize huge dissemination events across major Indian cities
• Perception of Korean government that international students may choose Korea due to lower costs does not hold too much in our case
• 73% did not consider the opportunity to live in Korea permanently later as a motivational factor ‘at all’
Language

Korean language classes before studies

Academic Fallout
Classes not always in English – difficult to understand accent / lectures or work in group projects with Korean students

Sociocultural Fallout
Limited interactions with Korean students or host society – ghettoisation
Korean HEIs

• **Courses**
  • Course content and its professional utility, assessment procedures ranked very highly

• **Teachers**
  • Well-qualified, but not well-trained to teach – teaching speed quite fast
  • Expect students to work and produce like machines without much ‘analytical skills’
  • Raising questions and classroom interactions not favorably looked upon
  • Barring Americans, don’t empathize with foreign students
  • IPR issues

• **Services**
  • 67% highly rate overall services provided by international students office
  • Counseling, learning support, associations, sports, etc. poorly ranked in relative terms
Support structures

• **Formal (moderately to highly satisfied):**
  • Educational institutions – 75%
  • Korean government offices – 63%
  • Host society – 58%
  • Indian embassy / consulates – 41%

• **Informal:**
  • Fellow Indian students for psychological (sick, homesick, troubled) and living support (accommodation, food, etc.)
  • Fellow Korean students where language is an issue (Korean life, finding way around, official work, educational issues and problems, etc.)
Recommend family/friends to study in Korea?

- No [16]
- Not sure [12]
- Yes [20]
Conclusions

• Korean government’s efforts at improving the quality of education and increasing the number of scholarships have paid off handsomely

• Introducing English courses has attracted Indian students, but the flip side is they don’t learn the language and face a whole series of resultant issues at the educational, emotional and social levels

• Following have taken a serious toll on overall impressions about Korea:
  • Limited Korean language skills
  • Limited intercultural understanding between teachers and students
  • Limited exchange between Indian and Korean students and society
  • Limited access to Indian food
    • 88% males – most don't know how to cook / don't like to
    • 67% pursuing PhD / overall work pressure, with little time to cook
  • Limited personal time and leisure to vent off work and psychosocial pressures / to interact with students / wider society / travel around which improves overall experience
Recommendations

• Regular independent surveys with international students

• Start out life in Korea with:
  • General orientation to Korean society, culture, educational system and its expectations
  • Small trips with other students to expose them to Korean geography, history, culture, etc.
  • Intensive Korean language course

• Provision of cheap international / Indian food options on- and off-campus

• Multicultural orientation for faculty, university staff and Korean students

• Counseling, sports, leisure, interactional and extra-curricular activities involving local and international students as well as faculty

• Enabling and flexible institutional environment for creative expressions

• Strict action against any form of discrimination at the institutional / social level
